

Northern shrimp

Pandalus borealis

Northern shrimp are distributed within Divisions 3LMNO and managed as two separate stocks: 3LNO and 3M. Fishing for shrimp in 3LNO has historically been confined to Div. 3L.

3LNO Division

Fishery status

A moratorium (no directed fishery) has remained in place since it was declared in 1995.

Recent assessments

No directed fishing in 2022 and 2023 as the stock is below B_{lim} with no indication of short-term recovery.

Directed fishing for Northern shrimp must follow the guidance of Article 9, NAFO Conservation and Enforcement Measures.

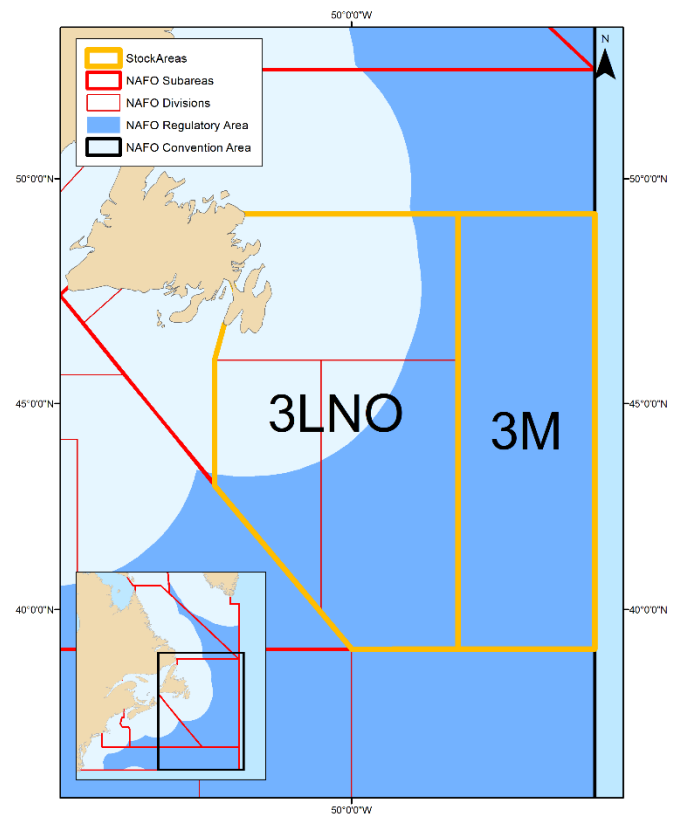

3M Division

Fishery status

A moratorium has remained in place since it was declared in 2010.

Recent assessments

The indications of improved recruitment in 2020 did not result in an increase in stock biomass and the stock remains below B_{lim} in 2022.

The orange frames indicate Divs. 3LNO and 3M Northern shrimp (PRA) management areas.
