## Fishery Statistics for 1987

Dartmouth, Nova Scotia
April 1990

# Preface

Annual fishery statistics of nominal catches and fishing effort for the Northwest Atlantic (FAO Major Fishing Area 21) had been published by the International Commission for the Northwest Atlantic Fisheries (ICNAF) in the *ICNAF Statistical Bulletin* between 1951 and 1978. As a result of the replacement of ICNAF by the Northwest Atlantic Fisheries Organization (NAFO) in 1979, *ICNAF Statistical Bulletin* Volume 28 for 1978 statistics was followed by the first issue of *NAFO Statistical Bulletin* which was numbered Volume 29 and contained fishery statistics for 1979. Publication of the Bulletin has continued under the aegis of NAFO by the Secretariat, where annual fishery statistics are presented of commercial nominal catches from the marine finfish, invertebrate and seaweed resources of the NAFO Convention Area (Subareas 0 to 6).

This issue, Volume 37 for 1987 data, contains the most recent year of completed data available to the Secretariat. The data were derived from STATLANT 21B reports by countries which are subject to the Regulations of NAFO and by non-member states, which reported fishing operations in the Northwest Atlantic during 1987. Data on quantities of fish and invertebrates are presented as "nominal catches" (i.e. live weight equivalent of the landings) in metric tons, and data for seaweeds are given as wet weight in metric tons. Catches of seals are given as numbers of animals. The statistics are presented on a calendar year basis and by month, where applicable. The tabular material in this issue was prepared directly from computer compilations, utilizing the Secretariat's own IBM Compatible PC-NEC 386 with an NEC LC-890 Laser Silentwriter and printed at the Secretariat.

This issue of the Bulletin is set out with four parts: **Part I** contains summaries of catches of selected finfish and invertebrate species by country and subarea for 1973-87; **Part II** contains the statistics of nominal catches and fishing effort for 1987; **Part III** contains the seal catches and hunting effort for 1987; and **Part IV**, contains corrections to previous issues of the Bulletin. In tables where various groups of species are used, they are in accordance with those listed in the "Definitions and Abbreviations". Further details of the tabular presentation of data are given in the text at the beginning of each Part.

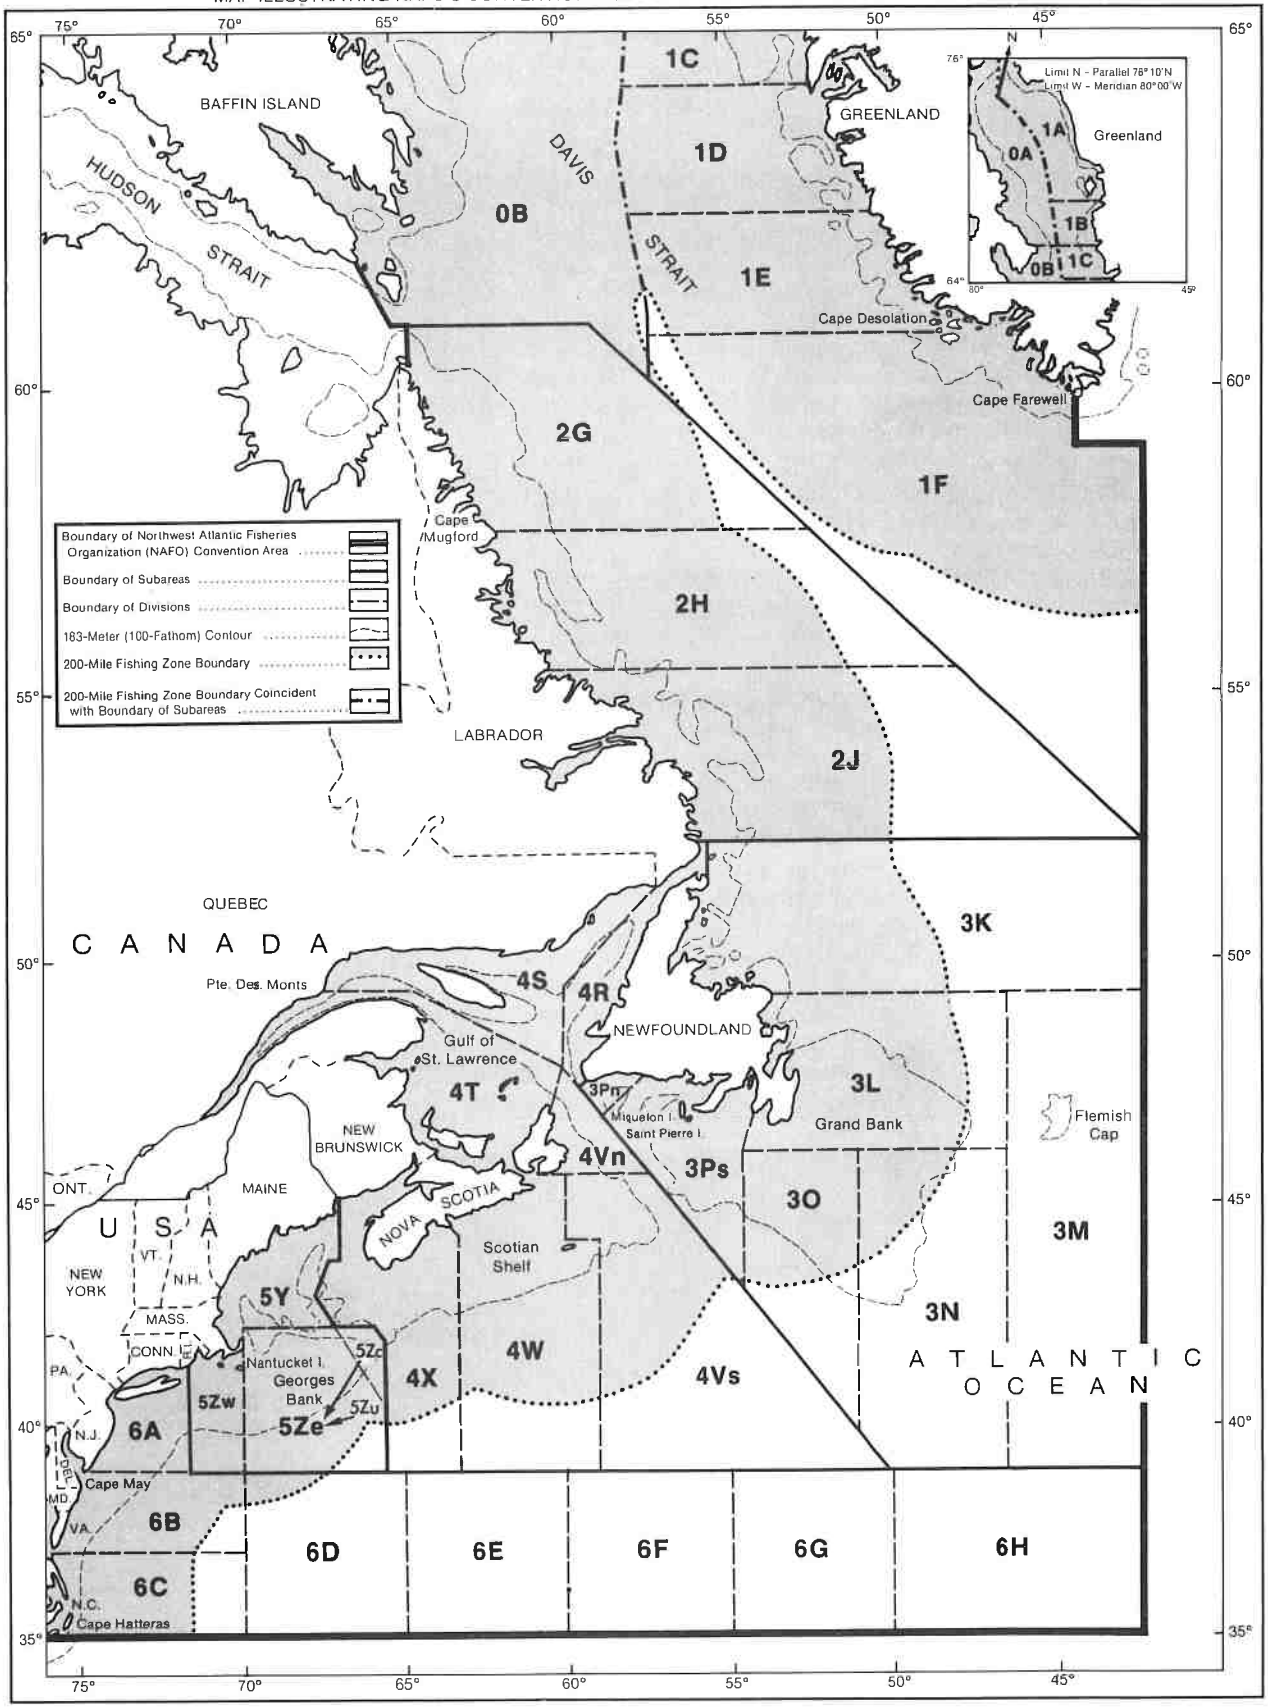

The Secretariat is pleased to acknowledge the efforts of countries through their statistical agencies in maintaining records of their fisheries in the Northwest Atlantic and contributing the data for publication in the Bulletin. In addition, the guidance of the Scientific Council and the Coordinating Working Party on Atlantic Fishery Statistics has been invaluable.

The delayed publication of this issue was due to the very late receipt of some final statistics.

## NAFO List of Species Items

The list of common English names and scientific names identified at the species, genus or family level referred to as species items, for the Northwest Atlantic, together with the standardized inter-agency 3-alpha identifiers, includes all species for which nominal catches have variously been reported. The order of presentation of the catches by species items and by the groups: groundfish, pelagic fish, other finfish, invertebrates, seaweeds and seals, in the various tables of Parts I, II and III of this Bulletin corresponds with the order in the following list, where applicable.

| NAFO Code | Common name | Scientific name of species items | 3-alpha identifier |
|---|---|---|---|
| | **Groundfish** | | |
| 101 | Atlantic cod | *Gadus morhua* | COD |

## Fishing Effort Measures for Gear Categories

The Coordinating Working Party on Atlantic Fishery Statistics (CWP) at its Eighth Session in September 1974, reviewed the effort units that could be applied to most of the major gear categories in the the FAO International Standard Statistical Classification of Fishing Gear. The CWP recognized that there was a need for further research to determine the best effort units for some gears, but, pending the determination of better definitions, nevertheless recommended that regional organizations should select from the FAO list those fishing effort units most appropriate for statistical reporting in their respective regions (FAO Fisheries Report, No. 156). Consequently, the following expanded list of definitions of effort measures (ICNAF Summary Doc. 75/14, Ser. No. 3485) was adopted at the 1975 Annual Meeting of ICNAF and subsequently endorsed by the Scientific Council of NAFO for use in the national reporting of effort data on STATLANT 21B forms:

| Effort level | Fishing gear | Effort measure | Definition |
|---|---|---|---|
| A. | Trawls | No. of hours fished | Number of hours during which the trawl was in the water (mid-water trawl), or in bottom (bottom trawl), and fishing. |
| | Boat seines (Danish seine etc.) | No. of hours fished | Number of hours during which the seine was on the bottom and fishing. |
| | Beach seines | No. of sets | Number of times the gear has been set or shot, whether or not a catch was made. |
| | Boat dredges | No. of hours fished | Number of hours during which the dredge was on the bottom and fishing. |
| | Surrounding nets (purse seines) | No. of sets | Number of times the gear has been set or shot, whether or not a catch was made. |
| | Gillnets (set or drifts) | No. of effort units | Length of nets expressed in 100-meter units multiplied by the number of sets made (=accumulated total length, in meters, of nets used in a given time period divided by 100). |
| | Gillnets (fixed) | No. of effort units | Length of net expressed in 100-meter units multiplied by the number of times the net was cleared. |
| | Traps (uncovered pound nets) | No. of effort units | Number of days fished times the number of units hauled. |
| | Covered pots and fyke nets | No. of effort units | Number of lifts times the number of units (=total number of units fished in a given time period). |
| | Longlines (set or drift) | Thousands of hooks | Number of hooks fished in a given time period divided by 1000. |
| | Handlines (pole, troll, jig, etc) | No. of line-days | Total number of lines used in the given time period. |
| | Harpoons | - | (Report effort levels B and C only.) |
| B. | All Gears | No. of days fished | The number of days (24-hour periods, reckoned from midnight to midnight) on which any fishing took place. For those fisheries in which searching is a substantial part of the fishing operation, days in which searching but no fishing took place should be included in "days fished" data. |
| C. | All Gears | No. of days on grounds | The number of days (24-hour periods, reckoned from midnight to midnight) in which the vessel was on the fishing ground, and includes in addition to The days fishing and searching also all the other days while the vessel was on the ground. |

## Abbreviations for Gears

The following standard abbreviations for gears, recommended by the CWP for use in regional and international statistical publications, were adopted at the 1975 Annual Meeting of ICNAF (ICNAF Summary Doc. 75/14, Ser. No. 3485) and used, where applicable, in all issues of *Statistical Bulletin* starting with Vol. 24 issued in January 1976:

## Abbreviations for Countries

The following standard abbreviations for countries used in this issue of the Bulletin are those recommended by the CWP at its Tenth Session in July 1980 (*FAO Fish. Rep.*, No. 242) and adopted by the Scientific Council at its September 1980 Meeting except that those for member states of the European Community (EEC) are prefixed with the letter "E" noting that data reported by France which were previously tabulated under E/FRA are now broken down to E/FRA-M for France (Metropolitan) and FRA-SP for France (St. Pierre and Miquelon):

## Abbreviations for Main Species

Limited space available for the tabulation of Table 5 in Part II has required the use of abbreviations for designating the main species sought (MSP). The 3-alpha identifier abbreviations as given in the "NAFO List of Species Items" above, that are used for describing the MSP in Table 5 are listed alphabetically below:

## Nominal Catches

All catches recorded for finfish and invertebrate species items referred to as "nominal catches", are defined as the live weight equivalent of the landings. Seaweeds are reported on a "wet weight" basis, and seals are reported as numbers of animals.

Under the assumption that all national statistical reports are compiled in accordance with the instructions for completing STATLANT 21B forms, the catches presented in Parts I and II of the Bulletin include all quantities used for human consumption and quantities utilized for industrial purposes (e. g. fishmeal production) but do not include quantities discarded (fish thrown overboard at sea).

# PART I

## Tabular Summaries of Nominal Catches, 1973-87

This section contains summary tables of nominal catches by country and subarea for the years 1973 to 1987, continuing the series of similar tables in previous issues of the ICNAF Statistical Bulletin up to Vol. 28 and NAFO Statistical Bulletin Vol. 29-36. All adjustments to nominal catches, resulting from the addition of Subareas 0 and 6 at different times during the ICNAF period and from the acquisition of fishery statistics for non-members of ICNAF until 1978 and of NAFO for 1979-87, have been incorporated into the statistical data base, and the summary tables now reflect the nominal catches for the whole of the Northwest Atlantic region, recognized by FAO as Major Fishing Area 21. All quantities in the summary tables are expressed in thousands of metric tons.

Table A contains the nominal catches of all species items (finfish, invertebrates and seaweeds) for the 1973-87 period by country and subarea and also the nominal catches of principal species and groups of species. Table B contains the nominal catches by country and subarea for the following selected species: Atlantic cod, haddock, Atlantic redfishes, silver hake, red hake, pollock, American plaice, witch flounder, yellowtail flounder, Greenland halibut, roundnose grenadier, wolffishes, Atlantic herring, Atlantic mackerel, capelin, shrimp and squids.

The symbols used in Tables A and B are defined as follows:

| | |
|---|---|
| + | Magnitude of catch known to be less than 500 tons. |
| - | Catch known to be zero. |
| ... | Data not available. |

# PART II

## Fishery Statistics for 1987

### Source of Data

Fishery statistics pertinent to the NAFO Convention Area (FAO Major Fishing Area 21) for the calendar year 1987 were derived from STATLANT 21B reports received by the Secretariat from the following countries or components: Canada (Maritimes), Canada (Newfoundland), Canada (Quebec), Cuba, Denmark, Faroe Islands, Federal Republic of Germany, France (Metropolitan) and France (St. Pierre and Miquelon), German Democratic Republic, Greenland, Italy, Japan, Norway, Poland, Portugal, Spain, Union of Soviet Socialist Republics, United Kingdom, United States of America and South Korea. Bulgaria and Romania reported no fishing activity in the Northwest Atlantic in 1987. Fishery statistics accruing from cooperative arrangements between coastal states and several countries in 1987 have been incorporated in the Tables 1 to 5, and treatment of these data are explained in the next section.

### Fishery Statistics from Cooperative Arrangements

Following the extension of jurisdiction over fishery resources to 200 miles by coastal states in January 1977, the development of cooperative arrangements between Canada and several countries resulted in confusion regarding responsibility for reporting fishery statistics accruing from such arrangements. Problems associated with double-counting and under-counting of catches were discussed in August 1977 at the Ninth Session of the CWP and it was agreed that in all instances the flag of the vessel should be the determining feature that establishes the country to whose national production the catches and landings should be allocated, regardless of fishing area or point of landing, and that this policy should only be overridden when it is obvious that the wording of chartering and joint operation contracts indicates otherwise or when the interrelations are too complicated to settle (*FAO Fish Rep.*, No. 197, page 10). Further discussion on this matter at the Tenth Session of the CWP in July 1982 (*FAO Fish Rep.*, No. 242, pages 24-25) resulted in reiteration of the basic concept, with some clarification. This policy has been followed in the preparation of fishery statistics for 1987 ( and preceding years, where relevant) insofar as it has been possible to obtain information on joint venture operations from the coastal states and to have the data verified or amended, where appropriate, by the countries involved.

Countries whose vessels fished within the 200-mile zones in 1987 through cooperative arrangements with Canada were Denmark, Faroe Islands, Greenland, Japan and USSR. The catch and effort data from these cooperative arrangements have been incorporated in the national statistics of the flag states involved, and are included in Tables 1 to 5 of this section. These data records are identified in Table 5 by an asterisk (*) in the GEAR column. However, for possible use in the management of catch quotas, the joint-venture data for the various countries involved are listed separately in Table 6.

### Data Presentation

Tables 1 to 3 in this section are presented in the same formats as those in preceding volumes of the Statistical Bulletin and contain the statistics on nominal catches in varying degrees of detail. Table 4 contains the nominal catches by month of selected species for which conservation measures have been established. Table 5, containing monthly catch and effort statistics, is presented in the new format which was adopted at the September 1980 Meeting of the Scientific Council.

Users of the Statistical Bulletin should note that any changes relating to standard abbreviations for countries, fishing gears, main species, months, species, and tonnage classes, are defined in the section entitled "Definitions and Abbreviations" (pages 9-15).

Following the decision of the Chamber of the International Court of Justice on 12 October 1984, which defined the maritime boundary between Canada and the United States between NAFO Subareas 4 and 5, the General Council in 1986 (NAFO GC Doc. 86/4 revised) adopted a line to distinguish statistics from Subdivision 5Ze as coming from 5Zc (from Canadian waters) and 5Zu (from the USA waters) (see map, page 4). In accordance with decisions of the Scientific Council in 1989 (*NAFO Sci. Coun. Rep.*, 1989, page 124), users of the Statistical Bulletin should note that the total catch and effort from the two units 5Zc and 5Zu correspond to Subdivision 5Ze.
