NINTH ANNUAL MEETING - SEPTEMBER 1987

Canadian Proposal for Additional Reference to the  
Scientific Council for Advice on the Management  
of Fish Stocks in Subarea 3 & 4

Canada proposes that the following paragraph be added to the request for scientific advice on the management of certain fish stocks in Subarea 3 and 4:

"With respect to American plaice in Divisions 3LNO, the Council should provide a review of its 1987 advice on the management of this stock in 1988. In particular comment should be provided as to whether the calculations of 1988 catches at given fishing mortalities are still considered to be valid, and if not the revised projections should be included."
