(a) at Greenland (b) other points away from home waters (c) caught in home rivers (d) at counting fences. An attempt has been made, particularly with the results from the North Esk releases, to interpret these categories strictly and this may give a misleading impression. For these releases, nearly all recaptures recorded under (b) were made in or near Montrose Bay (i.e. home waters) but not in the home river.

^z The figures given show the percentage of 1+, 2+, 3+ and 4+ year old fish in the sample.

^y Percentages based on whole migrating stock, not on tagged sample.

^x Mean based on very small sample of fish tagged.

^w Not yet analysed.
