ICNAF Res.Doc.68/48

ANNUAL MEETING - JUNE 1968

Breakdown of catch by type of gear in the  
Newfoundland inshore cod fishery in 1966

by

A. T. Pinhorn and A. W. May  
Fisheries Research Board of Canada  
Biological Station, St. John's, Nfld.

and

E. Dunne  
Department of Fisheries of Canada  
Economics Branch

During 1966 collection of statistics by the Department of Fisheries of Canada and the Fisheries Research Board of Canada was continued to furnish continuing information on the proportion of cod caught by each gear in the Newfoundland inshore fishery. The results are shown in Table 1 and Fig. 2 and the settlements sampled are shown in Fig. 1.

The catch breakdown by gear (Table 1 and Fig. 2) is based on the landings of boats under 26 tons as well as longliners over 25 tons.

Table 1. Percentages of cod landed in each month by each type of gear in the Newfoundland inshore cod fishery, 1966. The total amount landed in each month and the amount on which the breakdown by gear is based are shown for comparison. (T, codtrap; GN, gillnet; HL, handline; J, jigger; LL, longline). Longline includes linetrawl (longline hauled by hand) and longlines hauled by engine power with a gurdy.

Month	Amount landed ('000 lb)		Amount sampled ('000 lb)		Percent landed by					Percent landed by				
	Amount landed ('000 lb)	Amount sampled ('000 lb)	T	GN	HL	J	LL	T	GN	HL	J	LL
