

Serial No. 2868
(G.C.)

ICNAF Comm.Doc. 72/31

ANNUAL MEETING - JUNE 1972

Average catches and percentages taken by each country
for the major cod stocks in Subareas 2 and 3 and
for American plaice in Divisions 3L and 3N

by

Canadian Delegation

The following tables give the average catches and percentages taken by each country from the major cod stocks in Subareas 2 and 3 and from the American plaice stocks in Divisions 3L and 3N. The basic cod catch figures are taken from Table 3 of Res.Doc. 72/57 (with slight corrections for small errors in several catches) and the percentages by country were re-calculated on the basis of the cod catch in the Convention Area, omitting the catch outside the Convention Area within Canadian territorial limits. Amounts of American plaice in catch reported by some countries as "unspecified flounder" were estimated as indicated in the footnote.

Average cod catches and percentages taken by division and country from the major cod stocks in Subareas 2 and 3.
Catches not reported by division allocated according to Res. Doc. 72/57.
