ICNAF Comm.Doc. 74/42

FIFTH SPECIAL MEETING - NOVEMBER 1974

Chronological list of boardings made by United States inspectors
during the years 1971, 1972, 1973 and through September 1974

by

E.J. Medico and R.C. Levie
NMFS, Gloucester, Mass.

The United States, since the inception of the Joint Scheme of International Enforcement in August of 1971, has boarded for inspection 371 fishing vessels from I.C.N.A.F. member countries. This number represents 17 vessels boarded in 1971; 34 in 1972; 91 in 1973 and 229 in 1974, through the month of September. Records from the relatively small number of vessels boarded during the years 1971 and 1972 reflected poorly the true intent of I.C.N.A.F. by being wholly incomplete. In 1973 and 1974, logbook records did reflect an improvement, though still not truly meeting the required catch statistics.

Inspection of fishing vessels on the high seas in Statistical Subareas 5Y, 5Z, and Statistical Area 6, have revealed the need for accurate fishing logbooks to be kept by all member nations of I.C.N.A.F. The present variety of logbooks brings forth the need for a standard logbook easily understood by Inspectors from all nations when boarding under the International Inspection Scheme.

All vessels boarded carried logbooks designed to be maintained on a trawl-by-trawl basis. It has been found, however, that records very seldom accurately reflect observed catches. Most inaccuracies arise from problems connected with by-catch, particularly mixed by-catches which are difficult to estimate for each species. Captains have repeatedly listed only the primary species caught as separate entries and invariably lump the remainder of the catch into a single figure, if entered at all. The general failure to list secondary species individually defeats any sound management or conservation scheme when large amounts of immature protected species are recorded as by-catch or discarded and not recorded at all.

Examination of logbooks has been made difficult by language barriers. This, in addition to the noted discrepancies between logbooks on different vessels, strongly indicates that a standard logbook is needed. These books could be furnished by member governments following an I.C.N.A.F. format in the language of the national. A simple, clear plastic overlay in the I.C.N.A.F. language (English) could be supplied by I.C.N.A.F. to suffice as the interpretation to all logbooks, thus eliminating the present confusion.
