(G.b. 74)

ICNAF Summ.Doc. 75/26

ANNUAL MEETING - JUNE 1975

Provisional nominal catches in 1974 by country and stock area  
for species proposed for regulation in 1976

by Assistant Executive Secretary

The 1974 nominal catches for TAC species by country and stock area in the following tables are based on provisional catch statistics from the following sources:

- a) Summ.Doc. 75/32 for Bulgaria, Canada, Denmark, France, Japan, Norway, Poland, Romania, Spain, USSR, UK and USA.
- b) Summ.Doc. 75/32 (Addenda 1 and 2) for Portugal and Federal Republic of Germany.
- c) Preliminary statistics provided to the April 1975 Assessments Subcommittee Meeting for German Democratic Republic and Italy.

The provisional catch statistics compiled for the Annual Meeting are normally derived from STATLANT 21A reports which are due at the Secretariat by 15 April. Reports for the countries listed in (a) were received up to the end of May; those listed in (b) were received during the first week of June; but those listed in (c) had not reported their STATLANT 21A statistics up to 9 June 1975.

In view of the very preliminary nature of the 1974 statistics reported early in 1975 for the April 1975 Assessments Subcommittee Meeting, some of the nominal catches (thousands of tons) listed under 1974 in Table 1 of Summ.Doc. 75/18 (Report of the Assessments Subcommittee, April 1975) may differ from the totals given in the following tables.

It should be noted that the USSR catches under "Other finfish" and "All finfish and squids" include catches reported as sharks on STATLANT 21A but considered by USSR scientists to be mostly dogfish.
