SCIENTIFIC COUNCIL MEETING - JUNE 1993

Cod in Divisions 2J+3KL - Estimates of Biomass and Age Composition
for the Portion of the Stock in the NAFO Regulatory Area.

by

E.F.Murphy, and C.A.Bishop

Science Branch, Department of Fisheries and Oceans
P.O.Box 5667, St. John's, Newfoundland A1C 5X1

Introduction

The Fisheries Commission has annually requested information on "the stock separation in Div. 2J+3KL and the cod stock in Div. 3L in the NAFO Regulatory Area and a projection, if possible, of the proportion likely to be available in the Regulatory area in future years". Information is also requested on "the age composition of that portion of the stock in the Regulatory Area". This document updates information presented previously (Bishop et al., 1992) on the proportion of biomass occurring in the NAFO Regulatory Area (NRA) and the age composition of this biomass using data from the Canadian 1992 research surveys in the area. The issue of stock separation has been addressed in some detail by the Scientific Council in recent years (NAFO Scientific Council Reports, 1986) and the general conclusions recommending that the stock be managed as a single complex (2J+3KL) are still valid.

Results and Discussion

Survey coverage

The area of NAFO Div. 3L, in depths to 400 fathoms, is 42,265 sq. naut. miles, of which about 3700 or 9% occurs in the NRA (Table 1, Fig. 1). All areas within this depth zone in both Div. 2J and 3K are on the shoreward side of the Canadian 200-mile fishery zone. The total area in Div. 2J3KL to 400 fathoms is about 106,000 sq. naut. miles (Table 2); therefore, the area to this depth in the NRA in Div. 2J3KL is about 3.5% of the total.

Stratified-random research vessel surveys have been conducted by Canada in Div. 2J, 3K, and 3L during autumn since 1977, 1978, and 1981 respectively. Stratified-random surveys have also been conducted during spring since 1971 (excluding 1983-84) and during winter in 1985 and 1986. Surveys during spring for the 1971-76 period were incomplete with regard to strata coverage and have been excluded from analysis for this document.

Biomass estimates

For the spring surveys conducted during the 1977-90 period, the portion of total 3L biomass in the NRA has ranged from 0.4% to 6.0% with a mean of 2.9. In 1991, the percentage increased to 10.8% and further in 1992 to 16.1%, the highest in the time series (Table 3). Values for recent years may be underestimated as there has been evidence (winter hydroacoustic surveys and the commercial fisheries) to suggest that cod have moved to deeper waters and some may have been outside of the normal survey depth range (400 fathom). The February 1993 hydroacoustic survey located very few cod in Divisions 2J or 3K, and the only significant catch in 3L was 800 kg. caught in 930 meters in the NRA on the Nose of the Grand Bank.

Autumn survey results for the years 1981-92 indicated that from 0.5% to 7.7% of the 3L biomass occurred in the NRA with the 1992 value being about 1.2% (Table 4).

The 1985-86 winter survey results indicated that, in winter, about 25% of the 3L biomass occurred in the NRA. No stratified-random surveys have been conducted during winter since that time.

Surveys conducted during autumn for the years 1981-92 in Div 2J3KL indicated that only a small portion, less than 1%, of the total 2J3KL biomass occurs in the NRA at that time (Table 5). The average Divisional biomass from these surveys (Table 6) would suggest that, on average, less than 5% of the 2J3KL biomass occurs in the NRA throughout the year.

Age composition

The age compositions from spring and autumn research vessel surveys in Div. 3L since 1986 (Tables 7-8; Fig. 2-4) indicate for most years a higher proportion of younger cod in the NRA.

The 1985 and 1986 winter survey results, which indicated the highest seasonal proportion of 3L biomass in the NRA, also showed that the age compositions were similar in both areas.

Age compositions for the entire 2J3KL cod research vessel survey biomass (Table 9) were similar to those which occur in Div. 3L inside the 200-mile fishing zone.
