

SCIENTIFIC COUNCIL MEETING – JUNE 2000

NOMINAL CATCHES IN NORTHWEST ATLANTIC, 1994-98

by

NAFO Secretariat

The provisional nominal catch statistics for the Northwest Atlantic had been routinely tabulated from STATLANT 21A reports and prepared as SCS Documents for use at the June meetings of the Scientific Council, from the most current data available for the preceding year. Due to unavailability of data, these tabulations could not be compiled on a timely basis after the publication of SCS Document 94/24 containing the 1993 data. (In subsequent years the Secretariat presented Working Papers with the available data.)

This document contains the updated nominal catch statistics for the period 1994-98 taken from available STATLANT 21A and 21B reports up to 15 May 2000.

NOTING THAT the USA data for 1994-98 are only available as total catch by species, and the Faroe Islands data for 1998 are taken from STATLANT 21A reports, the following tabulation shows nominal catch by species, by country and Division for each year. The format of presentation is the same as that of Table 3 in the *NAFO Statistical Bulletin*, and accordingly titled as Table 3 in the following presentation.

The country abbreviations used in the tables are those recommended by the CWP (Coordinating Working Party on Atlantic Fishery Statistics) and adopted at the September 1980 Meeting by the Scientific Council, except that those of European Union members states are prefixed with the letter "E".
