1. The fishery

a - Greenland Halibut in Divisions 2+3

A small trawl fishery directed to Greenland Halibut took place in 2000. The fishery was carried by one stern trawler in the division 2J. A total of 272 t was caught.

b - Cod in subdivision 3Ps

The fishery for cod in Subdivision 3Ps was reopened in 1997 with a TAC of 10 000 t and this TAC was set at 20 000 t for 1998, 30 000 t in 1999 and reduced to 20 000 in 2000. In view of the 1994 Canada-France agreement, France has been allocated a share of 15.6 % of the TAC corresponding to 3120 t but covering a period from 1st of April 2000 to 31st March 2001. 70 % of this quota would be allocated to Canadian fishing companies to be landed in St-Pierre and Miquelon.

Table 1 gives the total reported French cod catches (provisional) per month and gear.

c – Iceland scallop in Subdivision 3Ps

There was no directed fishery for Iceland scallop by France in 2000.

2. Biological sampling data

a - Greenland Halibut in Subdivision 2+3

No length samples were collected by French observer on board the vessel in Divisions 2J. Sampling was conducted by Canadian observers.

b - Cod in subdivision 3Ps

All the different components of the fishery has been sampled for length monthly except where the low level of catches could not provide sufficient sampling. The ageing material was collected for all gears. The level of sampling is given in Tables 2 and 3.

Catches (t)	Cod			3Ps	TOTAL
	GN	HL	OTB5
