

SCIENTIFIC COUNCIL MEETING - JUNE 2004

Ukrainian Research Report for 2004

E. V. Romanov, S. T. Rebik, Yu. V. Korzun.

Southern Scientific Research Institute of Marine Fisheries and Oceanography (YugNIRO)
2, Sverdlov St., Kerch, 98300, Crimea, Ukraine.

1. Archival statistical data series

During 2004 historical archival data of Ukrainian fisheries in the Northwest Atlantic, which dated back to 1971 were analyzed, checked and aggregated in the form of STATLANT 21A. The data was presented to NAFO Secretariat. Compilation of this data in the STATLANT 21B form is under way.

2. Observation and sampling

The only Ukrainian vessel participated in fisheries was covered by national observation. Observer collected fisheries data and carried out biological sampling for size frequency and other biological parameters for American plaice (Division 3N), yellowtail flounder (Div. 3N), northern prawn (Div. 3L, 3M), and redfishes (Div. 3O). All the sampled data were digitized and stored in the YugNIRO database.
