

## SCIENTIFIC COUNCIL MEETING – JUNE 2007

## Spanish Research Report for 2006

by

F. González<sup>1</sup>, J. L. del Río<sup>1</sup>, A. Vázquez<sup>2</sup>, E. Román<sup>1</sup>, M. Casas<sup>1</sup> and G. Ramilo<sup>1</sup><sup>1</sup> Instituto Español de Oceanografía, Vigo, Spain<sup>2</sup> Instituto de Investigaciones Marinas, Vigo, Spain

All effort and catch information in this Report are based on information from NAFO observers on board. In 2006 information from 2769 days was available while total effort of the Spanish fleet in NAFO Regulatory Area was 2826 days (98% coverage). Estimates from NAFO observers of Spanish catches by species and Division in 2006 are presented in Table 1. The split by species of grenadiers were calculated based upon the percentage observed by the IEO scientific observers.

In addition to NAFO observers, IEO scientific observers were on board. All length, age and biological information presented in this paper is based on sampling carried out by IEO observers: in 2006, more than 400 samples were taken, with more than 74 000 individuals of different species examined. These samples were made in 355 working days that it means 12 % of the Spanish total effort.

## SUBAREA 1 and 2

**A. Status of the fisheries**

A total of 11 Spanish pelagic trawlers operated in NAFO Subarea 1 and 2 (Div. 1F and 2J) during 2006, amounting 263 days of fishing effort which part of them was carried out within the EEZ of Greenland. Catches in Div. 1F and 2J were 3186 tons of pelagic redfish (*Sebastes mentella*) (Table 1). Table 2 shows effort and catches by quarter and Division for this fishery.

More complete information about this fishery can be found in ICES North-Western Working Group Reports.

## SUBAREA 3

**A. Status of the fisheries**

A total of 23 Spanish trawlers operated in NAFO Regulatory Area, Div. 3LMNO, during 2006, amounting to 2 557 days (44 044 hours) of fishing effort. This implies a decrease in 2006 of 59% compared to 2003 effort (Table 3). Total catches (Table 1) for all species combined in Div. 3LMNO were 16 957 tons in 2006, compared to 18 855 tons in 2005.

Table 4 shows the effort (hours) by quarter and Division and their percentage. Table 5 presents the percentage of the effort by Division and mesh size.

These tables show that the Spanish fleet has three different fisheries in NAFO Subarea 3 characterized by different mesh size, target species, depth and fishing area. The Spanish fleet effort in NAFO area is mainly directed to

Greenland halibut (mostly in Div. 3LM), alternating with the skate fishery in the second half of the year (Div. 3NO), shrimp fishery (Div. 3LM), and redfish (Div. 3O). In Div. 3L, most of the effort was performed using cod-end mesh size of 135 mm, indicating that the fleet targeted Greenland halibut. In the first half of the year a small part of the effort was directed to the shrimp fishery. Regarding Div. 3M, most of the effort was carried out using 135 mm cod-end mesh size targeting Greenland halibut. The 17% of the fishing effort was carried out using 40 mm cod-end mesh size directed to the shrimp fishery. In Div. 3N and during the first half of the year, fishing was performed using 135 mm cod-end mesh size, which indicates that the fleet targeted Greenland halibut. However, since July a part of the fleet using 280 mm mesh size moved to depths of less than 200 m, where the skate fishery took place. Fishing effort in Div. 3O was limited (5%) and targeted redfish, using mainly 135 mm mesh size.

In addition to NAFO observers (NAFO Observers Program), 6 IEO scientific observers were onboard vessels, comprising a total of 355 observed fishing days, around 13% coverage of the total effort. Besides recording catches, discards, and effort, these observers carried out biological sampling of the main species taken in the catch. This includes recording weight at length, sex-ratio, maturity stages, performing stomach contents analyses, and collecting material for reproductive studies about Greenland halibut, roughhead grenadier and American plaice. Otoliths of these three species were also taken for age determination. Length and age distributions presented in this paper are based on sampling carried out by these observers. Parameters used for the length-weight relationships are shown by species in Table 6.

#### **Cod (Div. 3NO; Div. 3M)**

Main catches of this species were taken as by-catch in the Greenland halibut fishery and skate fishery in Div. 3N. Very few catches were taken in Div. 3LMO.

There is not length distribution samplings for this species.

#### **Redfish (Div. 3LN; Div. 3M; Div. 3O)**

Most of the catches in Div. 3LN and 3M were taken as by-catch in the Greenland halibut fishery. In Div. 3M a small part of the catches were taken as by-catch in the Shrimp fishery. A directed fishery for this species took place in Div. 3O mostly in the second half of this year. Catches have reached 1302 ton in this Division.

Table 7 shows the length distribution for Div. 3LN, all samples were taken in Division 3L. Catches length distribution for Div. 3M and 3O are presented in Table 8 and Table 9, respectively.

#### **American plaice (Div. 3LNO; Div. 3M)**

Most catches were taken in Div. 3LNO as by-catch of the Greenland halibut and skate fisheries. Catches in Div. 3M only amounted 33 tons and were taken as by-catch of the Greenland halibut fishery.

Length distributions for Div. 3LNO are presented in Table 10. There is not available length distributions for Division 3M.

#### **Witch flounder (Div. 2J and 3KL; Div. 3NO; Div. 3M)**

This species is taken as by-catch in the Greenland halibut fishery. This year, there was only one length distribution sample in Division 3L (Table 11).

#### **Yellowtail flounder (Div. 3LNO)**

Most of the catches were taken in Div. 3N as by-catch in the skate fishery. There was not length distributions available for this species.

### **Greenland halibut (Subareas 2 and 3)**

Greenland halibut is the main target species for the Spanish fleet in NAFO area, with most of the catches taken in the Flemish Pass area (Div. 3LM) at depths more than 700 meters. The mesh size used for this fishery was equal to or greater than 135 mm. Tables 12, 13 and 14 show length distributions of Spanish catches by Division. Total age composition, mean weight and mean length at age for Div. 3LMNO are presented in Table 15. Most of the Greenland halibut catches corresponds to ages 5 to 7; a range similar to the one observed in previous years.

### **Thorny skate (Div. 3LNO; Div. 3M)**

Catches comprise many species of skate, thus the catch of skate in Table 1 refers to *Raja spp*. Most of the catches were taken in Div. 3N at depths less than 200 meters, where a fishery directed to thorny skate took place mainly in the second semester of the year, using 280 mm mesh size. Skate catches in Div. 3LM were smaller than those in Div. 3NO and they were by-catch of the Greenland halibut fishery (135 mm cod-end).

Table 16 shows the total catches length distributions of Div. 3LNO, all samples were taken in Division 3N. There was not length distributions available for Division 3M.

### **Roughhead grenadier (Subarea 2 and 3)**

Roughhead grenadier is the main species taken as by-catch in the Greenland halibut fishery, and most of the 2006 catches were taken in Div. 3LM. Tables 17 and 18 show length distributions of Spanish catches by Division and length distributions of Spanish total catch for Div. 3LMNO. Age distributions, mean weight and mean length at age of the total catch for Div. 3LMNO are presented in Table 19. Most of the Roughhead grenadier catches in 2006 were based on ages 6 to 11.

### **White hake (Div. 3LMNO)**

Catches in 2006 are in the same level as before 2000. Catches of this species in 2006 are by-catch of different fisheries. In Div. 3LM they are by-catch of the Greenland halibut fishery and by-catch of the redfish fishery in Div. 3O. There was not length distribution samplings available in 2006.

## **(B) Research studies**

The Spanish bottom trawl survey in NAFO Regulatory area Div. 3NO was conducted in June 2006 on board R/V *Vizconde de Eza* using Campelen gear with a stratified design. A total of 120 valid hauls were carried out up to a depth of 1 450 m. The results of the Spanish 3NO bottom trawl survey for all the period studied (1995-2006), including biomass indices with their errors and length distributions, as well as the calculated biomass based on conversion of length frequencies for Greenland halibut and American plaice; Atlantic cod and yellowtail flounder; Thorny skate, white hake and roughhead grenadier are presented as Scientific Council Research documents. Feeding studies on the main species continued to be conducted, and material for histology (Cod, American place, Greenland halibut and redfish) and aging (Cod, American place, Greenland halibut, redfish, Roughhead grenadier, Yellowtail and Which flounder) studies were taken.

Ninety two hydrographic profile samplings were made in a depth range of 44 - 1393 m.

In 2003 it was decided to extend the Spanish 3NO survey toward Div. 3L (Flemish Pass), and 39 and 50 valid hauls were carried out in 2003 and 2004 respectively . In 2006 a total of 100 valid hauls were made by the R/V *Vizconde de Eza*, covering 24 strata of the Flemish Pass area in Div. 3L (Fig. 1), using a Campelen survey gear up to 1451 meters depth, and following the same procedure as in previous years. Total biomass, calculated by the swept area method, for the main species is shown in the Table 20. The results of this extension will be present in the future.

Oceanography and feeding studies on the main species continued to take place. Survey results for Div. 3LNO of the northern shrimp (*Pandalus borealis*) were presented in SCR 06/69.

The EU bottom trawl survey in Flemish Cap (Div. 3M) was carried out on board R/V Vizconde de Eza using the usual survey gear (Lofoten) from June 28th to July 27th 2006. The area surveyed was Flemish Cap Bank to depths up to 800 fathoms (1 400 m) following the same procedure as in previous years. The number of hauls was 181 and two of them were nulls. Survey results including abundance indices of the main commercial species and age distributions for cod, redfish, American plaice, roughhead grenadier and Greenland halibut are presented as Scientific Council Research documents. Flemish Cap survey results for northern shrimp (*Pandalus borealis*) were presented in SCR 06/66.

Feeding studies on the main species continued to be performed, and samples for histological assessment of sexual maturity of cod, redfish, Greenland halibut and Roughhead grenadier were also taken. Oceanography studies continued to take place.

## SUBAREA 6

### **A. Status of the fisheries**

One Spanish trawler operated in January 2006 in NAFO Subarea 6, Division 6G, amounting to 6 days of fishing effort. The most important species in the catches were *Aphanopus carbo* and *Beryx spp* in this order. There were not IEO scientific observer on board and, therefore, biological sampling was not available.
