SUBAREAS 1+2

A. Status of Fisheries

Greenland halibut

The directed trawl fishery for Greenland halibut was conducted in August-December. The fishery off West Greenland was carried out north of 68° N (Div. 1A) and south of 68° N (Div. 1CD).

In the area north of 68° N, four Russian trawlers were engaged in the fishery in August-November. The trawlers fished in the area between 68°30' N– 70°00' N and 59°00' W– 60°00' W at depths of 870 – 1250 m. According to preliminary data, the catch was 655 t, including 653.7 t of Greenland halibut (99.9% of the total catch). Northern wolffish and roughhead grenadier occurred sporadically in bycatches. The catch rates averaged 7.9 t per fishing vessel day.

In the area south of 68° N, five Russian trawlers participated in the fishery. The trawlers operated from August to December in the area between 63°30' N– 64°30' N and 55°00' W– 58°00'W at depths of 860 – 1550 m. The catch amounted to 1,223 t, including 1,214 t of Greenland halibut (99.1%), with an insignificant bycatch of northern wolffish and roughhead grenadier. The catch rates per fishing vessel day ranged from 3.5 t to 11.6 t and averaged 6.7 t. According to preliminary data, the annual catch of Greenland halibut taken by the Russian fleet off West Greenland was 1,868.4 t (Table 1).

Other fish species

There was no directed fishery for other fish species.

B. Special Research Studies

Biological data on Greenland halibut from Div.1AD were collected by observers aboard Russian fishing vessels.

Greenland halibut

In Div.1A, the length of Greenland halibut in catches ranged from 20 to 92 cm, specimens as long as 46 – 52 cm prevailed. The mean length of males was 48.5 cm, of females – 51.8 cm (Table 2). Sex ratio was approximately 1:1.

In Div. 1D, the catches were composed of individuals from 32 to 108 cm in length, fish as long as 50 – 52 cm prevailed. The mean length of males was 51.7 cm, of females – 57.2 cm. Sex ratio was 3.1: 1.

In Div. 1A, the age of Greenland halibut varied from 3 to 13 years, fish aged 6-8 years prevailed (Table 3).

Marine mammals

Observations made from fishing vessels in Div.1AD in August-October showed that bottle-nosed whales and sperm whales were occasionally sighted during hauling (Table 4).

Vulnerable Marine Ecosystems

Six species of corals belonging to the orders *Pennatulacea* and *Antipatharia* were found in the catches (Table 5). Their catches in a haul mainly made up 10-90 g. No sponges were recorded in the catches.

SUBAREA 3

A. Status of Fisheries

Greenland halibut

In 2010, Russian vessels fished for Greenland halibut from January to August. Four Russian trawlers were engaged in the fishery. The trawlers were fishing between 43°35' N – 48°55' N and 49°02' W - 43°39' W at 475 – 1350 m depths. The average daily catch rates ranged from 1.1 t in February to 15.4 t in July. The annual catch taken by Russian vessels in the directed fishery for Greenland halibut amounted to 1,551.1 t, including 1,482.3 t of Greenland halibut. In addition, 31.7 t of Greenland halibut were caught when fishing for other species.

According to preliminary data, the total catch of Greenland halibut was 1,514.4 t (Table 1). The bycatch consisted of 37.6 t (2.4%) of roundnose grenadier, 10.2 t (0.7%) of red hake, 7.4 t (0.5%) of roughhead grenadier and 6.9 t (0.4%) of skates. In addition, 31.7 t of Greenland halibut were taken when targeting other species.

Atlantic redfishes

In 2010, the Russian fishery in Div. 3M was conducted occasionally from January to October in the area between 46°26' N - 47°49'N and 46°15' W - 43°38 W, where three Russian trawlers conducted fishing at depths of 160-915 m during 39 vessel days. The daily catch varied from 2 to 37 t and averaged 20.9 t per fishing vessel day. The highest catch rates were recorded in September-October in mean coordinates 46°27' N, 44°05' W at depths of 175 – 580 m.

The annual catch of Atlantic redfishes taken by Russian vessels in the directed fishery was 848.8 t. In addition, 78.2 t of redfishes were caught in the Greenland halibut fishery. Preliminary data indicate that the total Russian catch of Atlantic redfishes amounted to 927 t (Table 1). The bycatch included cod (78.9 t), Greenland halibut (1.1 t), American plaice (8.6 t), witch flounder (19.5 t) and flatfishes

(1.6 t). Moreover, saithe, haddock, skates and hakes occurred sporadically in bycatches.

In Div. 3O, Russian trawlers fished in the southwestern Grand Bank occasionally, from January to October, during 14 days as a whole. The fishery was conducted between 43°04' N – 43°37' N and 51°42'W – 51°08' W at depths of 40 – 470 m. The highest catch rates were recorded in July and October, when they were 36.5 t and 41.2 t per fishing vessel day respectively.

The annual Russian catch of Atlantic redfishes taken in the directed fishery was 464.4 t. In addition, small quantities of redfishes (9.6 t) were caught in the Greenland halibut fishery. The total Russian catch of Atlantic redfishes in Div. 3O reached 474 t (Table 1). Bycatches included American plaice (8.8 t), cod (3.3 t), Atlantic halibut (1 t), skates (2.2 t), witch flounder (2.6 t) and yellowtail flounder (1.5 t) as well as Greenland halibut and roundnose grenadier which occurred sporadically.

On the eastern slopes of the Grand Bank (Div. 3LN), Russian vessels fished from July to October. Four Russian vessels conducted trawl fishing operations between 42°48' N – 48°08' N and 50°07' W – 46°30' W at depths of 170 – 900 m. The catch rates ranged from 12 t to 40 t and averaged 18.5 t per fishing vessel day. The highest catch rates were recorded in September and October when they were 32.2 t and 42.2 t per fishing vessel day respectively.

The annual Russian catch of Atlantic redfishes taken in the directed fishery reached 689.8 t. In addition, 37 t of Atlantic redfishes were caught in the Greenland halibut fishery. According to preliminary data, the total Russian catch of Atlantic redfishes was 726.8 t (Table 1). The bycatch consisted of 7.6 t of cod, 6.3 t of Greenland halibut, 5.8 t of witch flounder, 3 t of American plaice, 1.2 t of skates and 1.3 t of roughhead grenadier as well as yellowtail flounder and sharks which occurred occasionally in bycatches.

Cod

In 2010, the directed fishery for cod on the Flemish Cap (Div. 3M) was reopened after the moratorium. In January–February and April–May, 1–2 vessels conducted fishing operations between 46°29' N – 47°52' N and 46°14' W – 44°26' W at depths of 150 – 520 m. The most favourable fishing conditions were in January in the area between 46°29' N – 47°52' N and 46°14' W – 44°26' W and in April between 47°26' N – 47°40' N and 46°08' W – 45°54' W where the average daily catch rates were 18.4 t and 21.5 t respectively.

During the year, the trawlers engaged in the directed fishery caught 339.3 t, including 278.3 t of cod. Additionally, 94 t of cod were caught when fishing for other fishes, mainly redfishes.

The total Russian catch reached 374.1 t (Table 1). The bycatch was composed of 53.3 t of Atlantic redfishes (15.7%), 3.9 t of roundnose grenadier (1.1%) and in total 3.8 t (less than 1%) of witch flounder, skates and American plaice.

Other fish species

There was no directed fishery for other species. The bycatch of other fish species during directed fisheries amounted to 1 – 15%.

B. Special Research Studies

There were no special surveys to assess the stocks of target species. Biological data were collected by NAFO observers aboard fishing vessels.

*Greenland halibut (*Reinhardtius hippoglossoides*)*

In Div. 3L, Greenland halibut from 31 to 93 cm in length occurred, mean length 49.3 cm. Individuals as long as 45 – 51 cm prevailed (Table 6).

In Div. 3L, the age of Greenland halibut varied from 3 to 22 years, fish aged 6-8 years prevailed (Table 7).

In Div. 3M, the length of Greenland halibut varied from 25 to 113 cm, mean length 49.8 cm. Individuals as long as 45-49 cm prevailed (Table 6).

In Div. 3N, the length of Greenland halibut varied from 23 to 89 cm, mainly 47-49 cm, mean length 50.5 cm (Table 6).

In general, the length of Greenland halibut in Div. 3LMN was 23-113 cm, mean length 50.3 cm (Table 6).

*Roughhead grenadier (*Macrourus berglax*)*

The zoological length of individuals in the catches from Div. 3L ranged from 25 to 97 cm; the length 43-46 cm prevailed, mean length 49.7 cm (Table 8).

The length of roughhead grenadier in Div. 3N varied from 31 cm to 85 cm, mean length 53 cm. Individuals from 46 to 52 cm in length made up the bulk of catches. Some roughhead grenadiers also occurred in the catches from Div. 3M.

In general, roughhead grenadier as long as 25-97 cm, mean length 50.1 cm, occurred in Div. 3LMN (Table 8).

*Roundnose grenadier (*Macrourus rupestris*)*

In Div. 3L, the zoological length of individuals ranged from 25 to 70 cm, mean length 44.2 cm (Table 9).

In Div. 3M, the length ranged from 31 to 58 cm, mean length 42.6 cm (Table 8). In addition, some roundnose grenadier individuals were caught in Div. 3N (Table 8).

*American plaice (*Hippoglossoides platessoides*)*

In Div. 3N, the length distribution of American plaice taken in the Greenland halibut fishery was represented by individuals from 28 to 54 cm, mainly 32-34 cm in length, mean length 38.6 cm.

Specimens from 24 to 48cm in length occurred in Div. 3L, mean length 39.5 cm (Table 10).

*Threebeard rockling (*Gaidropsarus ensis*)*

In Div. 3L, the length of threebeard rockling varied from 13 to 52 cm, mean length 41.5 cm (Table 11). Individuals as long as 40-43 cm made up the bulk of catches.

*Witch flounder (*Glyptocephalus cynoglossus*)*

In Div. 3L, the length distribution of witch flounder in bycatches taken in the Greenland halibut fishery was represented by individuals as long as 22-52 cm, mean length 41.8 cm (Table 12).

In Div. 3N, the length of witch flounder varied from 31 to 52 cm, mean length 42.5 cm. Individuals from 37 to 43 cm in length made up the bulk of catches (Table 12).

Cod (Gadus morhua)

In Div. 3N, individuals from 37 to 88 cm, mainly 43-46 cm in length, represented the length distribution of cod. The mean length was 53.6 cm.

In Div. 3M, cod from 43 to 97 cm in length, mean length 67.1 cm, occurred (Table 13). Some individuals were sporadically caught in Div. 3L (Table 13)

Northern wolffish (Anarhichas denticulatus)

In Div. 3L, the length of Northern wolffish varied from 34 to 127 cm, mean length 67.9 cm (Table 14).

In Div. 3N, the length distribution ranged from 40 to 127 cm. The mean length was 66.5 cm. Some specimens of Northern wolffish were caught in Div. 3M.

Atlantic wolffish (Anarhichas lupus)

In Div. 3N, the length of Atlantic wolffish varied from 34 to 73 cm, mean length 50.8 cm (Table 15).

Black Dogfish (Centroscyllium fabricii)

Black Dogfish were taken as a bycatch in the Greenland halibut fishery in Div. 3LN. The length varied from 40 to 76 cm, mean length 62.6 cm (Table 16).

Blue hake (Antimora rostrata)

In Div. 3LN, individuals from 19 to 58 cm in length, mean length 41.6, occurred (Table 17).

Yellowtail flounder (Limanda ferruginea)

In Div. 3N, the length varied from 28 to 43 cm, mean length 37.3 cm (Table 18).

Deep-water redfish (Sebastes mentella)

In Div. 3L, individuals as long as 20-43 cm, mainly 33-35 cm in length, were caught. The mean length was 33.3 cm. Sex ratio was approximately 1:1 (Table 19).

In Div. 3N, the length fluctuated between 19 and 42 cm, mean length 27.3 cm (Table 19).

In general, redfish aged 6-22 years composed the catches in Div. 3LN (Table 20).

In Div. 3M, the length varied from 15 to 40 cm, mean length 27 cm. Individuals as long as 24-25 cm and 28-30 cm were predominant (Table 21).

Golden redfish (Sebastes marinus)

In Div. 3LN, the length of golden redfish varied from 34 to 55 cm, mean length 43.3 (Table 21). Golden redfish were sporadically caught in Div. 3M (Table 22).

*Acadian redfish (*Sebastes fasciatus*)*

In Div. 3L, Acadian as long as 19-40 cm, mainly 27-30 cm in length, were caught. The mean length was 27.8 cm.

In Div. 3N, the length ranged from 17 to 39 cm, mean length 24.2 cm (table 23).

In general, the length of Acadian redfish in Div. 3LN varied from 17 to 40 cm, mean length 24.3cm. Sex ratio was approximately 1:1 (Table 23).

In Div. 3M, the length distribution was represented by individuals as long as 17-35 cm, mean length 24.4 cm (Table 21).

Marine mammals

Dolphins, bottle-nosed whales and sperm whales were recorded in Div. 3LN during observations conducted aboard fishing vessels in May-August (Table 24).

Vulnerable marine ecosystems

In Div. 3LN, cold-water corals were recorded (Table 25). Their catch in a haul ranged from 4 to 2,190 g, mainly 10-40 g. Eleven coral species of the following orders were reported in the catches:

Alcyonacea, Antipatharia and *Pennatulacea* (Table 25).

Corals of the Order *Pennatulacea* were the most frequently caught ones. No cold-water corals were reported in the catches in other fishing areas. No sponges were recorded in the catches.
