SUBAREAS 1+2**A. Status of Fisheries***Greenland halibut*

The directed trawl fishery for Greenland halibut was conducted in August-December. In accordance with quota allocation for two areas, the fishery off the West Greenland was carried out north of 68° N (Div. 1A) and south of 68° N (Divs. 1CD).

In the area north of 68° N, five trawlers were engaged in the fishery. The trawlers fished in the comparatively small area between 69°06' N–70°06' N and 58°58' W–60°54' W at the depths of 880 – 1,160 m. According to the preliminary data, the catch was 648.0 t. The catch rates varied by months from 8.6 t to 17.3 t and averaged 10.5 t per fishing vessel day. There was a bycatch of 5.0 t of skate (Table 2).

In the area south of 68° N, up to five Russian trawlers participated in the fishery. The trawlers operated from August to December in the area between 63°26' N–64°29' N and 55°06' W–58°00'W at the depths of 995–1,500 m. The catch rates per fishing vessel day ranged from 6.0 t to 12.9 t and averaged 9.7 t. According to the preliminary data, the catch of Greenland halibut was 1,224.4 t. Bycatch consisted of northern wolffish (7.0 t) and roughhead grenadier (6.0 t)

On the whole, in the area off the West Greenland, the annual catch of Greenland halibut by Russian fleet amounted to 1,873 t (Table 1). In the bycatch skates, northern wolffish, roughhead grenadier were found (Table 2). There were no discards in the fishery.

Other fish species

There was no directed fishery for other fish species.

B. Research Studies

Biological data on Greenland halibut from Divs. 1AD were collected by observers aboard Russian fishing vessels. Studies included mass measuring and age sampling from selected species.

Greenland halibut

In Div. 1A, the length of Greenland halibut in catches ranged from 25 to 92 cm, specimens as long as 46 – 50 cm prevailed. The mean length of males was 47.4 cm, of females – 50.3 cm (Table 3). Sex ratio was approximately 1.1:1.

In Div. 1D, the catches were composed of individuals from 27 to 112 cm in length, fish as long as 50–54 cm prevailed. The mean length of males was 51.5 cm, of females – 59.7 cm. Sex ratio was 1.4: 1.

In Divs. 1AD, the age of Greenland halibut varied from 4 to 14 years, fish aged 7-8 years prevailed (Table 4).

Vulnerable Marine Ecosystems

Small numbers of coldwater corals *Anthoptilum* and *Stauropathes* were found in the catches of fishing vessels (Table 5).

Marine mammals

In the course of the observations made from fishing vessels, in October, in Divs. 1AD, the bottle-nosed dolphins and sperm whales were occasionally registered (Table 6).

SUBAREA 3

A. Status of Fisheries

Greenland halibut

Four trawlers were engaged in the directed fishery from March to December. The trawlers were fishing in the areas of the continental slope adjacent to the deep-water Flemish Pass (Div. 3L) between 46°15' N – 48°18' N at 750 – 1,900 m depths. Sometimes the vessels also fished in Div. 3M and 3N, at 710-1,340 m depths. As a whole, in the area, the catch rates per fishing vessel day ranged from 1.1 t to 13.0 t and averaged 8.4 t, per hauling hour - 0.53 t.

The annual catch taken by Russian vessels in the directed fishery for Greenland halibut amounted to 1,620.1 t of Greenland halibut. In addition, 6.9 t of Greenland halibut were caught when fishing for redfish species. According to the preliminary data, the total catch of Greenland halibut was 1,627.0 t with a national quota of 1,624.0 t (Table 1). The bycatch consisted of roughhead and roundnose grenadiers, red hake, deep-sea redfish, American plaice, witch flounder and northern wolffish (Table 7). In the fishery, the discards were composed of 2.3 t of different bottom fish species.

Cod

From January to April, on the Flemish Cap Bank, the directed fishery for cod was conducted by two medium tonnage trawlers between 46°25' N – 47°34' N and 44°57' W – 46°25' W, at the depths of 180 – 500 m. In June-September, fishery was carried out by one trawler between 46°27' N – 47°09' N and 45°09' W – 45°38' W, at the 240-450 m depths. The catch rates varied from 0.5 to 18.2 t per fishing vessel day averaging 19.1 t per fishing vessel day and 2.48 t per hauling hour.

During the year, the trawlers engaged in the directed fishery caught 502.0 t under a national quota of 647.0 t. Moreover, 153.0 t of cod were caught when fishing redfishes. According to the preliminary data,

the total Russian catch reached 654.7 t (Table 1). The bycatch was composed of 50.2 t of redfish, 0.1 t of American plaice and 0.1 t of witch flounder.

Atlantic redfishes

On the Flemish Cap Bank, fishery was conducted by bottom trawls, occasionally, from January to November, in the area between 46°24' N - 48°23'N and 46°29' W - 43°53' W, at the depths of 145-1,000 m during 63 vessel days. The catch rate varied from 9.9 to 41.3 t and averaged 28.2 t per fishing vessel day.

On the whole, the annual catch of the Atlantic redfishes taken by Russian vessels in the directed fishery was 1,522.0 t. In addition, 51.0 t of redfishes were caught in the Greenland halibut fishery. Thus, in Div. 3M, the total Russian catch of Atlantic redfishes amounted to 1,573.0 t (Table 1). The bycatch included cod and witch flounder (Table 8).

In Div. 3O, Russian trawlers fished by bottom trawls occasionally, from March to September. The fishery was conducted between 43°06' N – 43°29' N and 51°48'W – 51°05' W, at the depths of 140 – 500 m. The highest catch rate was recorded in May and June, when the values were 30.4 t and 33.9 t per fishing vessel day, respectively. According to the live data from PINRO, on the whole, the annual Russian catch of Atlantic redfishes taken in the directed fishery was 573.0 t (Table 1). Bycatches included American plaice, cod, Greenland halibut and white hake which occurred sporadically (Table 8).

In Divs. 3LN, Russian vessels fished by trawls, between 42°50' N – 48°07' N and 49°57' W – 47°13' W at the depths of 260 – 830 m, from May to December. When fishing by bottom trawl the catch rate ranged from 5.0 t to 35.8 t and averaged 21.7 t per fishing vessel day. The highest catch rate values were recorded in June and December when they were 26.7 t and 48.9 t per fishing vessel day respectively.

In June, during 15 fishing vessel days, 1 trawler fished concentrations of deep-sea redfish by pelagic trawl (fishing depth was 290-475 m) with the daily catch rate of 35.8 t.

According to the preliminary data, the annual Russian catch of Atlantic redfishes taken in the directed fishery reached 1,676.0 t. In bottom fishery, the bycatch consisted of cod, Greenland halibut, witch flounder and northern wolffish (Table 8). In the pelagic fishery, there were no observed bycatches of other species as well as registered discards. At the same time, about half of redfish catches (based on visual observation) escaped through the trawl codend mesh and stayed on the sea surface in the nonviable state. Redfish species (19.0 t) were also caught in the fishery of Greenland halibut.

By the preliminary data, the total catch of Atlantic redfishes in Divs. 3LN was equal to 1,695.0 t (Table 1).

*Yellowtail flounder (*Limanda ferruginea*)*

In Div.3N, directed trawl fishery was carried out for a short period, between 43°21' N – 44°34' N and 49°06' W – 50°24' W, at the depths of 60-80 m, in March and April. Two trawlers participated in the fishery. The catch rate equaled to 16.3 t per a fishing vessel day. In total, 82.0 t of yellowtail flounder were caught in the directed fishery (Table 1). The bycatch comprised the American plaice – 8.4 t, cod – 0.5 t and redfishes – 0.3 t. There were no discards observed.

Other fish species

There was no directed fishery for other species. The bycatch of other fish species during the directed

fisheries amounted to 1 – 15%.

B. Research Studies

There were no special surveys to assess the stocks of target species. Biological data were collected by NAFO observers aboard fishing vessels. Studies included mass measuring and age sampling from selected species.

*Greenland halibut (*Reinhardtius hippoglossoides*)*

In Div. 3L, Greenland halibut from 16 to 94 cm in length occurred, mean length was 49.3 cm. Individuals as long as 46 – 50 cm prevailed (Table 9).

In Div. 3M, according to the measurement of 2 fish, the length of Greenland halibut was 42-44 cm.

In Div. 3N, the length of Greenland halibut varied from 30 to 88 cm, mainly being equaled to 48-52 cm. The mean length was 50.9 cm.

In general, the length of Greenland halibut in Divs. 3LMNO was 18-96 cm, the mean length was 49.4 cm (Table 9).

In Divs. 3LN, the age of halibut varied from 4 to 17 years old, primarily, the fish was 6-8 years old (Table 10).

*Roughhead grenadier (*Macrourus berglax*)*

The total length of individuals in the catches from Div. 3L ranged from 22 to 93 cm; the length of 43-48 cm prevailed, the mean length was 51.2 cm (Table 11).

The length of roughhead grenadier in Div. 3N varied from 31 cm to 81 cm. Fish 46-48 cm in length made up the bulk of the catches. The mean length was 49.2 cm

In general, roughhead grenadier as long as 22-93 cm with the mean length of 50.9 cm occurred in Divs. 3LMNO (Table 11).

*Roundnose grenadier (*Coryphaenoides rupestris*)*

In Div. 3L, the total length of individuals ranged from 10 to 76 cm (Table 12), mainly amounting to 43-48 cm. The mean length was 42.9 cm.

*Acadian redfish (*Sebastes fasciatus*)*

In Div. 3M, the length distribution in catches was represented by individuals as long as 14-39 cm, mean length of females was 27.6 cm and of males – 25.3 cm. Individuals 24-26 cm in length predominated in catches (Table 13).

In Div. 3L, the Acadian redfish as long as 17-41 cm were caught. The mean length of females was 26.9 cm, of males – 24.7 cm. Fish with 24-25 cm length prevailed (Table 14). The age varied from 6 to 19 years mainly being 7-9 (Table 15).

In Div. 3N, redfish with the length ranged from 18 to 37 cm were found. Individuals with length of 21-22 cm made up the bulk of the catches. The mean length of males was 23.5 cm, of females – 25.2 cm (Table 14).

In Div. 3O, the Acadian redfish individuals as long as 18-39 cm and, primarily, 20-22 cm were typical. The mean length of males was 21.5 cm, of females – 22.6 cm. (Table 16).

*Deep-sea redfish (*Sebastes mentella*)*

In Div. 3L, the length of individuals varied from 18 to 47 cm, being mainly 27-32 cm. The mean length was 29.0 cm. Redfish aged 11-13 made up the bulk of the catches (Table 18).

In Div. 3M, the length distribution varied from 16 to 42 cm, the mean length was 28.1 cm (Table 13).

In Div. 3N, the redfish were caught as single individuals and had the length between 31 and 42 cm (Table 17).

*Golden redfish (*Sebastes marinus*)*

In Div. 3M, fish length ranged from 22 to 53 cm and averaged 34.4 cm (Table 13).

In Divs. 3LN, single fish with length of 31-57 cm were caught (Table 19).

In Div. 3O, the golden redfish were captured as single specimens with length varying from 41 to 51 cm (Table 16).

*American plaice (*Hippoglossoides platessoides*)*

In Div. 3L, in the fishery of Greenland halibut, the length distribution of that species in the bycatches was represented by fish 23-56 cm in length. The mean length was 38.7 cm (Table 20).

In Div. 3M, in the redfish species fishery, in the bycatches, the length varied from 31 to 52 cm averaging 38.8 cm.

In Div. 3N, in the skate species fishery, the length distribution of American plaice varied from 31 to 44 cm in the bycatches.

*Witch flounder (*Glyptocephalus cynoglossus*)*

In Div. 3L, in the Greenland halibut fishery, the bycatches of that species were represented by fish 23-56 cm in length averaging 40.1 cm (Table 21).

On the Flemish Cap Bank, fish length ranged from 41 to 52 cm. The mean length was 45.5 cm.

In Div. 3N, the witch flounder length varied from 31 to 60 cm. It was, primarily, 41-42 cm averaging 44.3 cm.

In Div. 3O, the length distribution was represented by 27-48 cm fish. The mean length equaled to 36.9 cm.

Cod (Gadus morhua)

On the Flemish Cap Bank, the length of cod amounted to 21-128 cm, being mainly 60-66 cm and averaging 64.0 cm (Table 22).

In Div. 3N, cod were captured as single fish and the mean length was 48.3 cm.

In Div. 3L, some individuals with the mean length of 47.1 cm were sporadically caught (Table 13)

Threebeard rockling (Gaidropsarus ensis)

In Div. 3L, the length of threebeard rockling varied from 28 to 51 cm, the mean length amounted to 39.7 cm (Table 23). Individuals as long as 37-39 cm made up the bulk of the catches.

White hake (Urophycis tenuis).

In Div. 3L, fish length ranged from 22 to 51 cm reaching 40.6 cm, on the average (Table 24). Mainly, individuals 40-42 cm in length were found.

In Div. 3N, a single specimen caught had the length of 44 cm.

Thorny skate (Amblyraja radiata)

In Div. 3L, in the fishery of Greenland halibut, some specimens as long as 33-84 cm (Table 25) and mainly, 59-63 cm occurred.

In Div. 3M, the length of thorny skate varied from 53 to 86 cm. the mean length amounted to 59.8 cm.

In Div. 3N, skate length distribution ranged from 38 to 86 cm. The mean length equaled to 58.0 cm.

In Div. 3O, fish with 69-92 cm length, 80.6 cm, on the average, were caught as single specimens.

Black dogfish (Centroscyllium fabricii)

Black dogfish were taken as a bycatch in the Greenland halibut fishery. In Divs. 3LMNO, the length of males varied from 43 to 75 cm, the mean length amounted to 61.3 cm (Table 26). Among females, the individuals as long as 43-78 cm, with the mean length of 66.6 cm, occurred. Fish as long as 61-66 cm predominated in the catches.

Northern wolffish (Anarhichas denticulatus)

In Div. 3L, the length of Northern wolffish varied from 34 to 120 cm. It was mainly 61-63 cm with the mean one of 65.7 cm (Table 27). In Div. 3M, fish as long as 52-108 cm were caught as a bycatch. The mean length was 83.3 cm.

In Div. 3N, the length distribution ranged from 46 to 75 cm. The mean length was 59.5 cm.

Blue hake (Antimora rostrata)

In Divs. 3LN, the length distribution of blue hake was represented by individuals 22-60 cm in length with the mean length of 37.3 (Table 28). Specimens 31-33 cm in length made up the bulk of the catches.

Marlin-spine grenadier (Nezumia bairdii)

In Divs. 3LNO, the total length of fish varied from 19 to 48 cm. The mean length amounted to 34.7 cm (Table 29).

Atlantic halibut (Hippoglossus hippoglossus)

In Divs. 3LN, single fish were caught. Length distribution varied from 73 to 160 cm. The mean length was 120.8 cm.

Other fish species

In the course of the fishery, small numbers of spotted (*Anarchicas minor*) and Atlantic wolffishes (*Anarchicas lupus*), blue ling (*Molva dypterygia*), longfin hake (*Phycis chesteri*), spiny eels (*Notacanthus spp.*) and other fish species were found in the bycatches.

Vulnerable marine ecosystems

According to the results from the research made by observers, the captures of cold-water corals with the total weight of not more than 2.5 kg were registered. The bulk of the bycatches was made up by corals from *Anthoptillium* and *Stauropathes* genera. Also, the representatives of *Pennatula* and other species were found (Table 30).

Marine mammals

Dolphins, bottle-nosed dolphins, sperm and pilot whales were recorded in Divs. 3LMN during the observations conducted aboard fishing vessels in March, April, May, June and September (Table 31).

Table 31. Occurrence of marine mammals in the NAFO Regulatory Area in 2011.

Date	Coordinates N-W	Reported species	Quantity	Remarks
28-30.04	46°21'- 47°06' с.ш. 46°37'- 47°11' з.д.	Bottle-nosed dolphin	1	Observed when hauling the trawl
01.05-03.05	47°34'- 47°54' с.ш. 46°40'- 47°01' з.д.	Sperm whale Bottle-nosed dolphin	1 1	Observed when hauling the trawl
04.05-06.05	48°04'- 48°10' с.ш. 46°40'- 47°36' з.д.	Sperm whale Bottle-nosed dolphin	2 2	Observed when hauling the trawl
07-17.05	46°23'- 47°20' с.ш. 46°32'- 47°16' з.д. 47°48'- 48°28' з.д.	Sperm whale Bottle-nosed dolphin	1 1	Observed when hauling the trawl
28.05-29.05	48°06'- 48°10' с.ш. 47°10'- 47°40' з.д.	Sperm whale Bottle-nosed dolphin	2 1	Observed when hauling the trawl
30.05-12.06	46°22'- 47°54' с.ш. 46°35'- 47°22' з.д.	Sperm whale Bottle-nosed dolphin	1 1	Observed when hauling
6.06	46°33'с.ш.- 47°19' з.д.	Dolphin	5	Moved northward
30.05-12.06	46°22'- 47°54' с.ш. 46°35'- 47°22' з.д.	Sperm whale Bottle-nosed dolphin	1 1	Observed when hauling the trawl
13.06-18.06	48°06'- 48°10' с.ш. 47°07'- 47°38' з.д.	Sperm whale Bottle-nosed dolphin	3 2	Observed when hauling the trawl
19.06-25.06	46°58'- 47°56' с.ш. 46°34'- 47°28' з.д.	Bottle-nosed dolphin	1-2	Observed when hauling the trawl
26.06-30.06	48°06'- 48°07' с.ш. 47°09'- 47°37' з.д.	Sperm whale Bottle-nosed dolphin	1 2-4	Observed when hauling the trawl
07.07- 05.09	45°25'- 48°10' с.ш. 46°29'- 48°28' з.д. 48°07' с.ш. 47°36' з.д -	Sperm whale Pilot whale	2-6 15-30	Observed when hauling the trawl
7.09	46°27'1с.ш. 46°08'6 з.д.	Whide-sided d olphin Sperm whale	2-6	Followed along the course of the vessel
13.09	47°29'6 с.ш. - 47°15'7 з.д.	Sperm whale	1	Moved southeastward
13.09	47°31'4 с.ш. - 47°15'0 з.д.	Sperm whale	1	Moved southeastward
