

### **SCIENTIFIC COUNCIL MEETING – JUNE 2017**

#### **Faroese Research Report for 2016**

by

Luis Ridao Cruz

Faroe Marine Research Institute, Tórshavn, Faroe Islands

The present report represents information of Faroese fishing vessels operating in the NAFO Regulatory Area (NAFO-RA). The fishery targets mainly cod (*Gadus morhua*) in SA 3. Other species like Greenland halibut and redfish (*Sebastes* spp.) are also caught to a lesser extent. Official catch statistics are reported to NAFO by the Fisheries Inspection authorities (stored on STATLANT database). Collection of logbooks and biological measurements (fish length) of cod are provided by NAFO observers employed by the Faroese Ministry of Fisheries. Samples of fish length and weight measurements are also taken on board fishing vessels by crew members (non NAFO-observers).

Faroese landings of cod in NAFO SA 3 since 2010 are shown in Table 1. Catches have fluctuated from 1185 t. in 2010 to 3394 t. in 2014. Recorded catches in 2016 were 3131 t. The Faroese quota of cod in 3M is 22.35%. A complete list of catches by species from 2010 to 2016 is shown at the end of the document as an Annex.

**Table 1.** Faroese landings (tons) of cod in SA 3 from 2010 to 2016. (Source: Statlant)

Area	2010	2011	2012	2013	2014	2015	2016
3L	0	31	4	3	25	1	1
3M	1183	2211	2045	3144	3369	3319	3124
3N	2	0	0	1	0	2	6
Total	1185	2242	2049	3147	3394	3321	3131

The number of fishing vessels operating in the NAFO area has varied between 4 and 13 from 2010 to 2016. From 2010 to 2012 most of the catch was taken by trawlers whereas the share of catches by longliners has increased substantially since 2013 (Table 2). Just 25% of the total Faroese catch was taken by trawlers in 2016.

**Table 2.** Share of catches (percentage) of cod in SA3 by fleet segment. Longliners (LL) and trawlers (TR) since 2010.

Gear	2010	2011	2012	2013	2014	2015	2016
LL	0%	2%	2%	92%	27%	63%	75%
TR	100%	98%	98%	8%	73%	37%	25%

The spatial distribution of the fishery in 2015 and 2016 is shown in Figure 1. A total of 68 and 258 hauls were recorded in 2015 and 2016 respectively. Mean depth of hauls by trawlers is around 360 m. whereas longliners operate at average depths of 430 m. The catch profile with respect to depth is shown in Figure 2. Trawlers are fitted with mesh sizes ranging from 135 mm to 150 mm. in cod-ends. Catches are taken in the direct fishery.

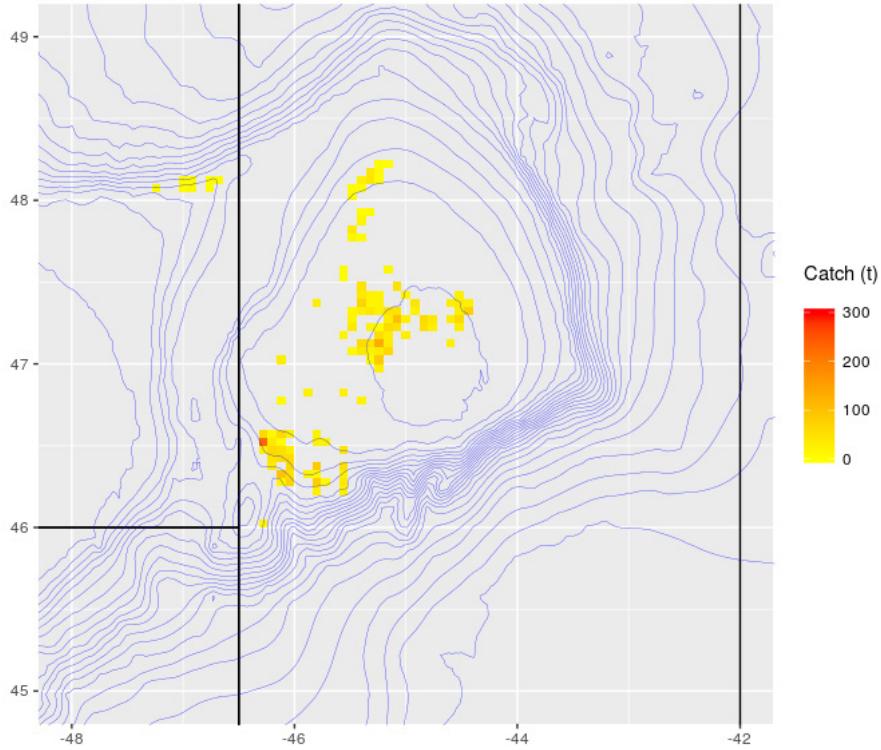

Fig. 1. Spatial distribution of Faroese fishery (trawlers and longliners) in 2015 (n=68) and 2016 (n=258).

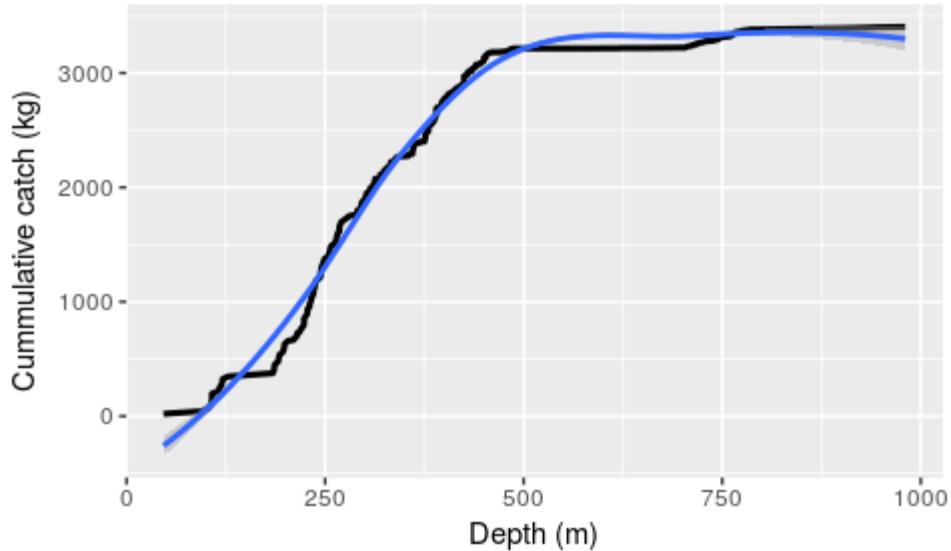

Fig. 2. Relation between cumulative catch and average depth (black line) for Faroese vessels in 2015 ( $n=68$ ) and 2016 ( $n=258$ ). Blue curve is a smoothed curve.

Length distributions (sampled numbers) of cod from 2014 to 2016 are presented in Table 3 and Figure 3. Average length size was estimated at 59 cm in 2014, 62 cm in 2015 and 73 cm in 2016. The number of individuals sampled was 1796, 5152 and 4794 from 2014 to 2016 respectively. The number of samples was 21 in 2014, 48 in 2015 and 47 in 2016. Samples from non-NAFO observers include individual weight measurements. Number of samples taken including weight measurements was 21 in 2014 and 5 in 2015. The relationship between length and weight is illustrated in Figure 4 and Table 4.

**Table 3.** Length distribution of 3M cod from 2014 to 2016. Total number of individuals sampled was 11742 and number of samples 116.
