

**SCIENTIFIC COUNCIL MEETING – JUNE 2020****Russian Research Report for 2019**

By Konstantin Fomin and Maria Pochtar

**Polar Branch of Russian Research Institute of Fisheries and Oceanography (VNIRO)**  
6 Akademika Knipovicha Street, Murmansk, 183038, Russia

**SUBAREAS 1+2****A. Status of Fisheries*****Greenland halibut (Reinhardtius hippoglossoides)***

In 2019, a directed trawl fishery for Greenland halibut was conducted off West Greenland from July to November. In accordance with the quota allocated between the two divisions, the fishery was carried out off West Greenland north (Div. 1A) and south of 68°N (Div. 1 CD).

In the area north of 68°N, four trawlers were engaged in the fishery in July-August and October-November. The trawlers operated in the area between 69°13'N-70°08'N and 60°55'-58°54'W at depths of 770-1255 m. According to preliminary data, the catch of Greenland halibut was 549.8 t (Table 1). Northern wolffish (*Anarchicas denticulatus*) amounting to 0.1 t and roughhead grenadier (*Macrourus berglax*) amounting to 0.1 t occurred in the by-catch (Table 2). The catch rate ranged from 9.4 to 26.0 t per fishing day and averaged 13.5 t per fishing day.

In the area south of 68°N, as many as five trawlers participated in the fishery. The trawlers operated from July to November in the area between 63°44'N-64°29'N and 57°57'W-54°51'W at depths of 900-1260 m. The catch rate per fishing day ranged from 15.6 to 32.0 t and averaged 22.7 t. Preliminary data suggest that the catch of Greenland halibut was as high as 1119.0 t (Table 1). The by-catch was comprised of 0.2 t of roughhead grenadier (*Macrourus berglax*), 0.7 t of northern wolffish (*Anarchicas denticulatus*) and 1.3 t of roundnose grenadier (*Coryphaenoides rupestris*) (Table 2).

The total annual catch of Greenland halibut taken by the Russian vessels off West Greenland amounted to 1668.8 t (Table 1).

***Other fish species***

There was no directed fishery for other fish species.

**B. Targeted investigations**

Biological data on Greenland halibut in Div. 1ACD was collected by observers on fishing vessels.

### ***Greenland halibut***

In Div. 1AD, Greenland halibut from 19 to 103 cm in length, an average length of 53.4 cm and predominance of individuals of 52-54 cm in length, were fished (Table 3).

### **SUBAREA 3**

#### **A. Status of Fisheries**

##### ***Greenland halibut***

In 2019, the Russian fishery for Greenland halibut was conducted from January to October. Four Russian fishing vessels were engaged in the trawl fishery. Catch rates for N/S-1 vessels varied from 11.3 to 17.7 t and averaged 14.7 t per fishing day. For N/S-2 vessels, the highest catch rate was 23.3 t, averaging about 20.8 t per fishing day.

The total annual catch of Greenland halibut taken in the directed fishery amounted to 1554.517 t. Additionally, 0.17 t of Greenland halibut were taken as a by-catch in the redfish fishery.

The total catch of Greenland halibut was 1554.685 t (Table 1). Roughhead renadier, roundnose grenadier, redfishes (*Sebastes* sp.), skates (Rajidae), witch flounder (*Glyptocephalus cynoglossus*), Atlantic halibut (*Hippoglossus hippoglossus*), American plaice (*Hippoglossoides platessoides*) and Greenland shark (*Somniosus microcephalus*) occurred in by-catch (Table 4).

##### ***Atlantic cod (Gadus morhua)***

The Russian directed fishery for Atlantic cod on the Flemish Cap was conducted from August to October by two vessels and their average daily catch rate was as high as 20.1 t.

The annual catch of Atlantic cod taken by Russian fishing vessels in the directed fishery was 1131.7 t. In addition, 0.5 t of Atlantic cod were taken in the redfish fishery and 0.1 t of cod were captured in the multispecies fishery. The total Russian catch of Atlantic cod on the Flemish Cap was as high as 1132.3 t (Table 1).

##### ***Atlantic redfishes on the Flemish Cap***

The directed fishery for redfishes was scarcely carried out. In October, three hauls were done by a N/S-1 vessel and the catch was as high as 8.6 t of redfishes. In addition, 1.6 t of redfish were taken as a by-catch in the Atlantic cod fishery. According to preliminary data, the total annual catch of redfishes was as high as 10.2 t. The by-catches were comprised of 0.5 t of Atlantic cod and 0.3 t of Atlantic halibut (Table 5).

*In Div. 3O*, Russian trawlers operated sporadically in a south-western part of the Grand Bank of Newfoundland from April to December at depths of 300-306 m. Russian vessels caught 34.3 t of redfishes in the directed fishery. Greenland halibut, witch flounder, silver hake (*Merluccius bilinearis*), American plaice, Atlantic cod and Atlantic halibut occurred in the by-catch (Table 5).

In addition, 3.6 t of redfishes were taken in the witch flounder fishery and 6 t of redfishes were captured in the multispecies fishery.

The total Russian catch of redfishes was as high as 43.9 t (Table 1). The bulk of catches have been comprised of Acadian redfish (*Sebastes fasciatus*) in recent years.

*In Div. 3LN*, the Russian directed fishery for redfishes was conducted from January to October by N/S-1 and N/S-2 fishing vessels at depths of 178-540 m. The catch rates of bottom trawl varied from 15.8 t to 28.4 t and averaged 24.1 t per fishing day.

Russian fishing vessels caught 5019.4 t of redfishes in the directed fishery. By-catches were comprised of the following species: witch flounder, skates, Atlantic halibut, white hake (*Urophycis tenuis*), Atlantic cod and American plaice (Table 5). Redfishes were taken as a by-catch in the witch flounder fishery (2.8 t) and in the multispecies fishery (23.8 t).

The Russian catch of redfishes was as high as 5046.0 t (Table 1).

### ***Skates***

No directed fishery for skates was conducted. Skates were taken as a by-catch in the fishery for yellowtail flounder (9.8 t), witch flounder (12.3 t), cod (9.3 t), Greenland halibut (0.6 t) and redfishes (6.8 t).

The total Russian catch of skates in the Div. 3LMNO for the entire period amounted to 38.8 t (Table 1).

### ***Yellowtail flounder (*Limanda ferruginea*)***

The Russian directed fishery for yellowtail flounder was of short duration in January in Div. 3N between 43°20'-43°40'N and 50°31'-49°53'W at depths of 58-60 m. The average daily catch rate was 25.5 t. During the year, a total of 81.9 t of yellowtail flounder were taken by Russian fishing vessels in the directed fishery. The by-catch was comprised of 9.8 t of skates, 3.6 t of American plaice, 2.9 t of Atlantic cod and 0.35 t of Atlantic halibut.

The total Russian catch of yellowtail flounder amounted to 81.9 t (Table 1).

### ***Witch flounder***

A directed fishery for witch flounder was carried out from January to May between 42°55'-43°25'N and 51°44'-49°44'W at depths of 200-602 m. The daily catch rate was as high as 11.7 t per fishing day. Atlantic cod, skates, American plaice, white hake, Atlantic halibut, redfishes and silver hake occurred in by-catches (Table 6). In total, 206.1 t of witch flounder were taken in the directed fishery in 2019. Witch flounder were captured as a by-catch in fisheries targeting Greenland halibut (1.8 t) and redfishes (64.6 t) and in the multispecies fishery (29.4 t).

The total annual catch of witch flounder was as high as 301.9 t (Table 1).

### ***Other species***

There was no directed fishery for other species.

## **B. Targeted investigations**

No surveys of target species were carried out. Biological data were collected by NAFO observers on fishing vessels.

### ***Greenland halibut***

In Div. 3L, Greenland halibut from 24 to 118 cm in length averaging 52.5 cm occurred. Individuals from 49 to 54 cm prevailed (Table 7).

The length of Greenland halibut in Div. 3M varied from 33 to 99 cm, predominately 50-57 cm, and averaged 54.8 cm.

In Div. 3N, the length of Greenland halibut in catches ranged from 22 to 92 cm averaging 50.5 cm. Individuals from 40 to 45 cm were predominant.

In Div. 3O, Greenland halibut from 25 to 71 cm in length, averaging 51.2 cm, dominated.

In general, the length of Greenland halibut in Div. 3LMNO varied from 22 to 118 cm and the average length of males and females was 48.7 and 54.2 cm respectively. The sex ratio (males and females) in catches was 1:3 (Table 7).

#### ***Acadian redfish (Sebastes fasciatus)***

In Div. 3L, catches were made up of fish from 15 to 44 cm in length, where the mean length of females was 31.1 cm and that of males was 27.6 cm. Individuals of 27-30 cm in length were predominant in catches (Table 8).

Moreover, an individual of 22 cm in length was captured in Div. 3M.

In Div. 3N, redfish of 15-63 cm in length were fished and individuals of 23-25 cm were predominant. The mean length of males and females was 23.8 and 27.4 cm respectively (Table 8).

In Div. 3O, Acadian redfish of 19-37 cm in length occurred. The mean length of males was 24.0 cm while that of females was 26.0 cm (Table 8). The length of 23-25 cm was predominant in Acadian redfish.

#### ***Deep-water redfish (S. mentella)***

In Div. 3L, deep-water redfish were represented by individuals from 27 to 45 cm in length averaging 35.8 cm (Table 9). The mean length of males and females was 33.6 cm and 36.8 cm respectively.

In Div. 3M, the length of deep-water redfish varied from 15 to 58 cm averaging 40.9 cm for males and 43.6 cm for females (Table 9).

In Div. 3N, deep-water redfish from 17 to 45 cm in length averaging 24.1 cm for males and 28.4 cm for females occurred (Table 9).

In Div. 3O, deep-water redfish of 16-35 cm in length averaging 25.6 cm for males and 25.7 cm for females prevailed (Table 9).

In general, the mean length of deep-water redfish in 3LMNO was as high as 25.8 cm, where that of males was 24.4 cm and 28.6 cm for females (Table 9).

#### ***Golden redfish (S. marinus)***

Golden redfish occurred singly in each division. The length of golden redfish varied from 31 to 69 cm in 3LMNO. The mean length of males was 50.3 cm while that of females was 50.0 cm (Table 10).

#### ***Atlantic cod***

In Div. 3M, the length of cod varied from 21 to 127 cm averaging 65.6 cm (Table 11).

#### ***Roughhead grenadier***

In Div. 3L, individuals of 26-84 cm in length averaging 49.7 cm were fished (Table 12).

In Div. 3M, the total length of roughhead grenadier varied from 33 to 63 cm, with a mean length of 46.8 cm (Table 12).

In Div. 3N, roughhead grenadier from 28 to 78 cm in length averaging 49.9 cm prevailed (Table 12).

In Div. 30, roughhead grenadier from 20 to 55 cm in length averaging 40.0 cm occurred (Table 12).

### **American plaice**

In Div. 3L, the length of American plaice varied from 25 to 54 cm and averaged 37.7 cm (Table 13).

In Div. 3M, American plaice from 29 to 62 cm in length averaging 43.9 cm were taken as a by-catch (Table 13).

In Div. 3N, American plaice of 23-72 cm in length averaging 39.5 cm prevailed (Table 13).

In Div. 3O, the length of American plaice was within 24-62 cm and averaged 38.4 cm (Table 13).

### **Witch flounder**

In Div. 3L, the length composition in by-catches was represented by fish from 31 to 55 cm, with a mean length of 41.2 cm (Table 14).

In Div. 3M, witch flounder from 36 to 54 cm in length, a mean length of 43.6 cm, were taken as a by-catch (Table 14).

In the 3N witch flounder fishery, individuals of 26-59 cm in length, averaging 42.3 cm, were fished (Table 14).

In Div. 3O, witch flounder of 15-56 cm in length averaging 40.8 cm prevailed (Table 14).

### **Skates**

In Div. 3L, skates of 31-87 cm in length, averaging 56.1 cm, occurred in by-catches (Table 15).

The length of skates in Div. 3M varied from 30 to 70 cm averaging 49.2 cm (Table 15).

The by-catch of skates in Div. 3N was comprised of individuals of 31-95 cm in length averaging 64.0 cm (Table 15).

In Div. 3O, the length of skates was within 15-92 cm averaging 70.7 cm (Table 15).

### **White hake**

In Div. 3L, two individuals of 49 and 62 cm in length were captured.

The by-catch in Div. 3N was comprised of individuals ranging from 38 to 86 cm in length averaging 55.3 cm (Table 16).

In Div. 3O, white hake of 30-107 cm in length averaging 56.4 cm prevailed (Table 16).

### **Yellowtail flounder**

In Div. 3N, individuals from 16 to 47 cm averaging 34.6 cm were taken in the fishery for yellowtail flounder (Table 17).

### **Northern wolffish**

In Div. 3L, the length of northern wolffish varied from 40 to 118 cm averaging 68.6 cm (Table 18).

In Div. 3M, northern wolffish of 50-117 cm in length, averaging 75.0 cm in length, were taken as a by-catch (Table 18).

In Div. 3N, northern wolffish from 38 to 116 cm in length, with an average length of 63.2 cm, prevailed (Table 18).

In Div. 30, the length of northern wolffish in by-catches varied from 42 to 112 cm averaging 60.6 cm (Table 18).

#### ***Atlantic wolffish (Anarhichas lupus)***

In Div. 3L, individuals of Atlantic wolffish from 34 to 62 cm in length, averaging 48.9 cm, were taken as a by-catch (Table 19).

In Div. 3M, Atlantic wolffish of 38-77 cm in length, averaging 56.5 cm, prevailed (Table 19).

By-catches of Atlantic wolffish in Div. 3N were comprised of fish of 23-82 cm averaging 59.4 cm (Table 19).

In Div. 30, two individuals of Atlantic wolffish of 52 and 63 cm in length each averaging 57.5 cm were taken

#### ***Spotted wolffish (Anarhichas minor).***

In Div. 3L, four individuals of Atlantic wolffish of 45, 62, 80 and 113 cm in length were captured.

In Div. 3M, Atlantic wolffish from 48 to 96 cm in length averaging 78.2 cm were taken as a by-catch (Table 20).

In Div. 3N, Atlantic wolffish of 44-107 cm in length averaging 69.6 cm prevailed (Table 20).

By-catches of Atlantic wolffish in Div. 30 were made up of individuals from 20 to 65 cm in length averaging 45.9 cm (Table 20).

#### ***Blue antimora (Antimora rostrata)***

The length composition of blue antimora in Div. 3L was represented by individuals from 27 to 65 cm in length averaging 42.7 cm (Table 21).

In Div. 3M, blue antimora from 26 to 58 cm in length, averaging 43.3 cm, were taken as a by-catch (Table 21).

In Div. 3N, blue antimora of 24-32 cm in length averaging 28.3 cm prevailed (Table 21).

#### ***Black Dogfish (Centroscyllium fabricii)***

In Div. 3L, three individuals of 64, 69 and 79 cm were captured.

In Div. 3N, the length composition was represented by black dogfish of 40-72 cm in length, with an average length of 56.3 cm (Table 22).

In Div. 30, a single black dogfish of 46 cm in length was recorded.

#### ***Threebeard rockling (Gaidropsarus ensis)***

In Div. 3L, the length composition of this species was made up of individuals from 27 to 47 cm in length, with an average length of 40.4 cm (Table 23).

In Div. 3M, threebeard rockling of 20-40 cm in length, averaging 29.7 cm, were taken as a by-catch (Table 23).

### ***Red hake (*Urophycis chuss*)***

In Div. 3L, the length of red hake varied from 34 to 51 cm and averaged 44.6 cm (Table 24).

In Div. 3M, red hake of 35-51 cm in length, averaging 43.4 cm, prevailed (Table 24).

In Div. 3O, red hake from 21 to 40 cm in length were singly taken as a by-catch. The average length was 31.4 cm (Table 24).

### ***Greater eelpout (*Lycodes esmarkii*)***

The length of greater eelpout in Div. 3L varied from 36 to 57 cm and averaged 45.9 cm (Table 25).

In Div. 3N, the length of greater eelpout ranged from 33 to 69 cm and averaged 47.5 cm (Table 25).

In Div. 3O, individuals within 32-60 cm in length, averaging 45.8 cm, were taken as a by-catch (Table 25).

### ***Marlin-spike grenadier (*Nezumia bairdii*)***

In Div. 3L, marlin-spike grenadier from 27 to 42 cm in length, an average length of 34.3 cm, were taken as a by-catch (Table 26).

In Div. 3M, marlin-spike grenadier of 21-42 cm in length, with an average length of 32.7 cm, prevailed (Table 26).

In Div. 3N, by-catches of marlin-spike grenadier with a length within 21-42 cm and an average length of 30.3 cm were typical (Table 26).

In Div. 3O, marlin-spike grenadier varied from 20 to 34 cm in length, with an average length of 28.0 cm (Table 26).

### ***Atlantic halibut***

In Div. 3L, individuals from 66 to 160 cm in length, averaging 96.8 cm, were taken as a by-catch (Table 27).

In Div. 3M, the length of Atlantic halibut in by-catches was within 75-125 cm and averaged 95.4 cm (Table 27).

In Div. 3N, Atlantic halibut from 50 to 220 cm in length, with an average length of 90.0 cm, were taken as a by-catch (Table 27).

In Div. 3O, Atlantic halibut from 52 to 210 cm in length, an average length of 93.9 cm, prevailed (Table 27).

### ***VME indicator species***

Occurrences of sponges (Porifera) and corals (Cnidaria) in catches were recorded by the observers operating onboard fishing vessels. In none of the catches the weight of VME indicator species exceeded the established reference points (Table 28).

### ***Marine mammals***

Based on observations on fishing vessels from August to October in Div. 3LMNO, cetaceans (Cetacea), namely the short-beaked common dolphins (*Delphinus delphis*), the northern bottlenose whale (*Hyperoodon ampullatus*), the sperm whale (*Physeter macrocephalus*), the white-beaked dolphin (*Lagenorhynchus*

*albirostris*), the minke whale (*Balaenoptera acutorostrata*), as well as two occurrences of non-identified whales and dolphins were recoded (see Table 29).

The total number of marine mammals recorded (occurrences) was 106 (Table 30).

No discards were recorded in the fisheries for targeted species.

**Table 29.** Marine mammals in the NAFO Regulatory Area recorded in 2019.

Date	Latitude	Longitude	Species	Number	Remarks
25.08	48°42'N	43°38'W	Short-beaked common dolphin	3	on port side, 100 m
29.08	46°26'N	46°10'W	White-beaked dolphin	8	on port side, 400-500 m
29.08	45°39'N	47°27'W	Short-beaked common dolphin	6	near the broad side and ahead of the vessel
01.09	43°13'N	51°23'W	Short-beaked common dolphin	4	swam around the trawl when it was hauled in
01.09	43°34'N	50°36'W	Short-beaked common dolphin	9	approached the fishing vessel
02.09	44°40'N	48°55'W	Dolphin	5	ahead of the vessel, jumped out of the water
06.08	54°54'N	39°44'W	Short-beaked common dolphin	15	transit 320°
08.08	47°36'N	45°01'W	Minke whale	1	when setting-retrieving a longline
24.08	58°05'N	35°35'W	Whale	1	in transit
30.08	58°56'N	32°43'W	White-beaked dolphin	20	in transit
21.09	56°52'N	35°20'W	Northern bottlenose whale	17	transit 270°
29.09	53°34'N	39°14'W	Sperm whale	5	in transit
01.10	47°32'N	44°46'W	Northern bottlenose whale	5	when setting a longline
02.10	47°28'N	44°44'W	Minke whale	3	when setting-retrieving a longline
08.10	47°28'N	44°45'W	Sperm whale	4	astern when setting a longline

**Table 30.** Total number of marine mammals in the NAFO Regulatory Area in 2019.

Species	Number	Number of occurrences	% of the total number
White-beaked dolphin	28	2	26.4
Northern bottlenose whale	22	2	20.8
Minke whale	4	2	3.8
Sperm whale	9	2	8.5
Short-beaked common dolphin	37	5	34.9
Whale	1	1	0.9
Dolphin	5	1	4.7
Total	106	15	100
