

Serial #52

INTERNATIONAL COMMISSION FOR

THE NORTHWEST ATLANTIC FISHERIES

ICNAF Meet. Doc. 52/9

DIGEST OF COD STATISTICS FOR THE CONVENTION AREA.

The data contained in this report are extracts from the Statistical Report prepared from original statistics furnished by the ten countries participating in the fishing of the Convention area (Document VII).

Statistics in these Summaries are finally expressed in Metric tons of Round Fresh fish. Various Conversion Factors were applied, depending on the state of fish as landed and according to the time involved between catches and landings. Due to the above processing, data depart somewhat from reality. Adequate data on Conversion Factors were not available for compilation of these tables and they are accordingly subject to future correction. Further information concerning sources and notes are to be found in the summaries for each country (Document VII).

The Digest table for 1950 includes statistics for 1951 for Faroes, Iceland and Spain because no data for 1950 were given by these countries. Thus the Grand Total is only an approximation of cod landings for 1950.

The final table summarizes the statistics received by June 1952 at Commission headquarters for the period 1930 to 1951.

J. Côté,
Statistician.
