ANNUAL MEETING - JUNE 1972

Icelandic Research Report, 1971
Subarea 3

by

J. Magnusson

A. Status of the Fisheries

The Icelandic fishery for cod and redfish in the ICNAF Area remained at a very low level in 1971 as in 1969 (but there was no Icelandic fishery at all in the ICNAF Area in 1970).

Icelandic trawlers fished only in Div. 3K. The total catch after 15 days in two trips was only 104 tons of cod and 174 tons of redfish, not including discards of 5 tons cod and 3 tons redfish.

No special research was carried out in the ICNAF Area during 1971.
