

**INTERNATIONAL COMMISSION
FOR THE
NORTHWEST ATLANTIC FISHERIES**

SAMPLING YEARBOOK

VOLUME 15

for the year 1970

**Issued from the Headquarters of the Commission
Dartmouth, N. S., Canada**

April, 1972

PREFACE

This volume of the Sampling Yearbook contains length, age and weight data for cod, haddock, redfish, silver hake, herring, American plaice, Greenland halibut, witch, yellowtail, pollock, white hake, red hake, argentine and butterfish, and a listing of available data on *Gadus ogac*, *G. sarda* (polar cod), Arctic char, sea scallops and squid, all collected during the calendar year 1970 in the ICNAF Area. These data were contributed by Canada, Denmark, France, Fed. Rep. Germany, Japan, Poland, Portugal, Spain, USSR, UK and USA. Also included are herring length and age data from a non-member country for the years 1967 to 1970.

Presentation of the length and age data for all species, except herring, follows the 1964 recommendation of the Sampling Subcommittee (*Redbook* 1964, Pt. I, p.36-37):

- a) that length composition data be reported as numbers per mille by month, division, gear and vessel category, and that they be broken down by sex for redfish and species of flounders and also by 50-fathom depth zones for redfish. Other items of relevant information should be reported and published in accordance with earlier recommendations (*Redbook* 1962, Pt. I, p.39-41). The importance of continuing to supply data on the number and weight of fish measured and the number and weight of fish caught or landed in the sampled fishery is particularly stressed.
- b) that age data for cod and haddock be reported and published in the form of age-length keys on actual numbers basis, grouped by quarters, division, gear and vessel category. For other species, age composition data should be reported as numbers per mille as in the past.
- c) that when both length and age composition data are available for cod and haddock, they should be reported and published in a composite, tabular form called age-length table which consists of:
 - (i) the age-length key, in actual numbers, of the composite quarterly age samples,
 - (ii) the length composition, in per mille, of the composite monthly length samples, and
 - (iii) the age composition of landings in each month of the quarter by using the age-length key to calculate the proportion of ages in each length group in the composite length compositions.

Presentation of the length and age data for herring follows the 1969 recommendation of the Statistics and Sampling Subcommittee (*Redbook* 1969, Pt. I, p.50):

- a) that herring length data be published by country and by month for all ICNAF divisions, except Division 5Y for which the data be presented for a northern subdivision (from the Maine/New Brunswick border to the Maine/New Hampshire border) and for a southern subdivision (from Maine/New Hampshire border to Cape Cod);
- b) that herring lengths be published in cm to the cm below;
- c) that the herring sampling data not be reported by gear or vessel category;
- d) that the herring age-length keys be published by quarters for Divisions 4X, 5Y and 5Z only, on a trial basis, with frequent review.

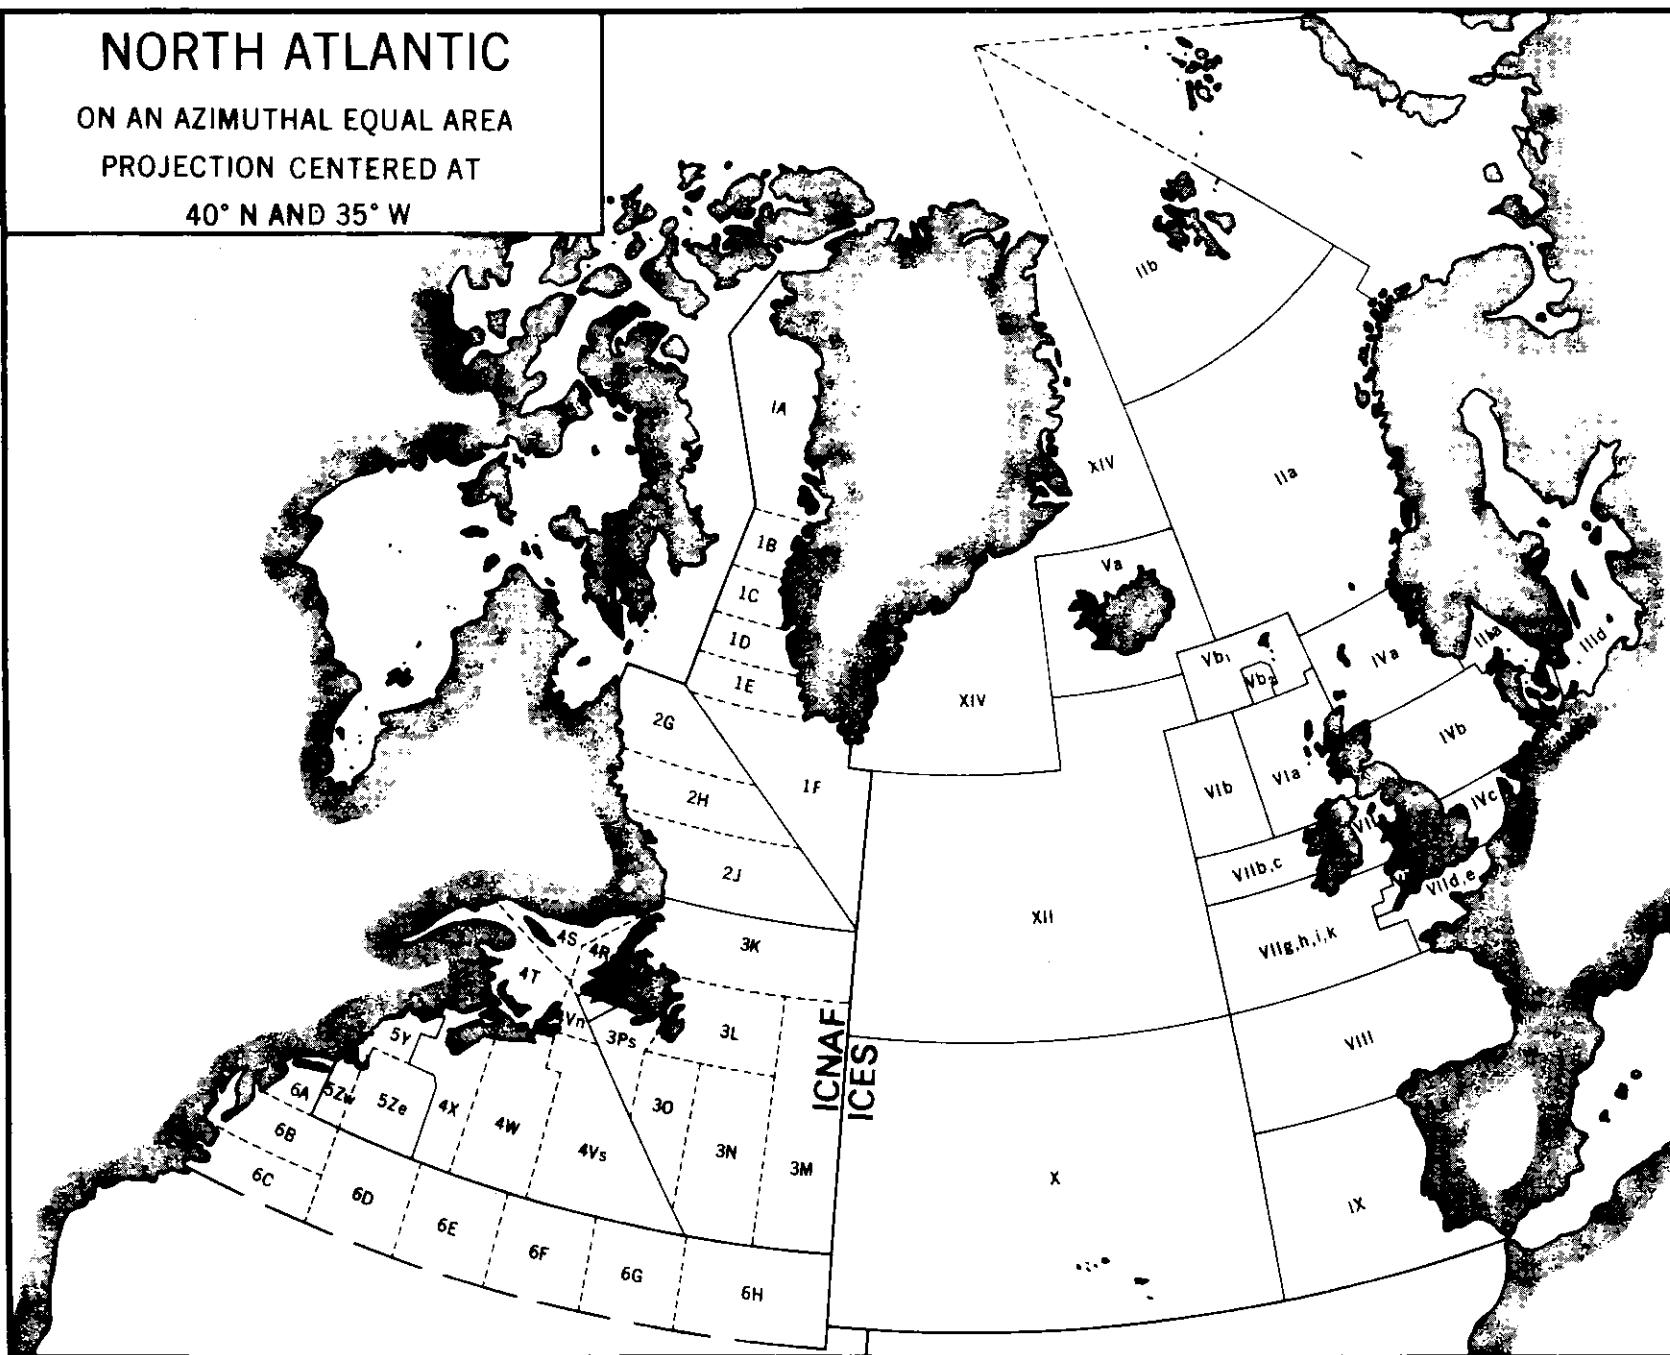

In accordance with the requirements of the Statistics and Sampling Subcommittee (*Redbook* 1968, Pt. I, p.69-70), information on length and age data collected by countries but not reported on ICNAF sampling forms is presented in tabular form in the section on "Notes on Sampling Data".

The Appendix contains two tables showing, for each major species, division, country and gear, the numbers of fish sampled for length and age in relation to total catch for the years 1969 and 1970 (*Redbook* 1970, Pt. I, p.71). These data are summarized to show the "sampling efficiency" by country, gear and subarea in Tables A and B, which follows the section "Notes on Sampling Data".

The Secretariat is grateful to those scientists who have continued to support the Commission's needs for more and adequate sampling of the Northwest Atlantic fisheries with a view to providing better assessments of the state of the stocks and the effects of the fisheries and regulatory measures upon them.

This volume of the Sampling Yearbook was produced in the Secretariat largely through the efforts of Mrs E. R. Cornford and Mrs V. C. Kerr who prepared the tabular material and Mr G. Moulton who did the multigraphing.

NOTES ON THE SAMPLING DATA

The following notes on sampling, contributed by the reporting countries, contain information relating to the methods of collection and presentation of the length and age data. The notes also contain tabular information on length and age data which were collected by some countries but not reported on ICNAF sampling forms.

CANADA (Maritimes)

Reported by: A.C. Kohler, D.N. Fitzgerald

Commercial landings of groundfish in the provinces of Nova Scotia, New Brunswick and Prince Edward Island have been continuously sampled for size and age composition since 1945. Sampling emphasis has been placed on landings by offshore vessels at the largest groundfish ports, but has also included sampling from the inshore fleets. Length frequencies from routine sampling of the commercial catches and landings are reported to ICNAF. Age-frequency data are collected for most species but are not reported. Length frequencies by sex are usually given for redfish, American plaice, yellowtail, witch and winter flounder.

Landings of cod and haddock are normally culled by market category. Cod are divided into large (over 10 pounds, fresh gutted weight) and medium ($2\frac{1}{2}$ to 10 pounds). Small cod and haddock are mainly less than $2\frac{1}{2}$ pounds. Small round haddock are sometimes landed in a separate market category. These market categories are usually sampled approximately in proportion to the relative numbers of each in the landed catch. When the weight of the landed catch becomes available, the length frequency of the landing is determined by applying weighing factors to each category. Other species reported are not usually culled by market category.

Length frequencies of haddock landings from the Bay of Fundy part of Division 4X differ markedly from those from the offshore banks, and these are reported separately as follows: (1) the area north of latitude $44^{\circ}00'N$, and (2) the area south of latitude $44^{\circ}00'N$.

Fork length measurements are recorded to the nearest centimetre. These are reported by 3-cm groups for cod and pollock, 2-cm groups for haddock, white hake and cusk, and 1-cm groups for redfish and flounders.

Actual mesh sizes of codends used by trawlers on the trips sampled are not available. The usual designation of mesh size for trips sampled is "large" for sizes of approximately 114 mm and "small" for sizes of approximately 76 mm, the latter being used for redfish trips only. Various brands and kinds of synthetics are used. Manila otter trawls have become obsolete. Hook size is given by number, No. 6/0 being the smallest commercial groundfish hook and No. 14 being the largest hook used on longlines.

CANADA (Newfoundland)A. Groundfish

Reported by: A.T. Pinhorn, R. Wells, T. Collier

Length frequencies are based on samples obtained from the landings of the commercial groundfish fishery. Research samples from Labrador are taken on commercial gears operated from a small research vessel.

Measurements are recorded to the nearest centimetre for fork lengths of cod, haddock and redfish, and for total lengths of flounders (American plaice, witch and yellowtail). Measurements are made on shore before appreciable culling has occurred in the processing plants. Samples of landing after discard indicate that some of the catch was discarded at sea prior to landing, whereas samples of landing before discard indicate that no fish were thrown away before landing. The sample frequencies are converted to numbers per mille, but are otherwise unadjusted.

For trawls the mesh size is designated as "large" or "small", the latter being permitted only for redfish fishing in the southern part of Subarea 3 and westward. For gillnets and traps the approximate mesh sizes are given in inches. For handlines and longlines hook sizes are given by number.

The following table gives the number of pairs of otoliths collected for ageing during the course of sampling the commercial landings of groundfish in 1970. Length frequencies, corresponding to the listed age samples, are included in the length frequency tables.

Div	Gear	Month	Pairs of Otoliths	Div	Gear	Month	Pairs of Otoliths

B. Herring

Reported by: V.M. Hodder, R. Chaulk

The commercial herring fishery in Newfoundland has been sampled for size and age composition since 1965. Sampling emphasis has been placed on the catches of purse seiners landed at the major ports along the south coast of Newfoundland where most of the herring are caught. Purse seine catches are not culled and, consequently, there are no discards of small fish. The catches are sampled during the unloading of the vessels while the herring are in a relatively fresh condition.

In the Newfoundland area two or more distinct herring stocks may be exploited within the same ICNAF Division and the combining of data for these stocks is not very meaningful. In Div. 3Ps length compositions are reported separately for two areas: (1) Burgeo to Pass Island, and (2) Fortune Bay. In Div. 4R (west coast of Newfoundland) length compositions are reported for three areas: (1) Bonne Bay, (2) Hawke's Bay, and (3) St. Georges Bay.

Measurements are total lengths tabulated to the $\frac{1}{2}$ cm below; i.e. all fish whose actual total lengths fall within the range 30.0 to 30.9 cm are tabulated as 30 cm. Mean lengths were calculated directly from the length frequencies and mean weights were obtained by applying the appropriate length-weight curve for each stock to the corresponding frequencies.

Otoliths samples for age determinations are collected routinely during the course of sampling for lengths, but these data are not reported to ICNAF.

C. Salmon

Reported by: A.W. May

Commercial samples of Atlantic salmon collected during 1970 are as follows:

Div	Gear	Month	Lengths & Scales	Div	Gear	Month	Lengths & Scales
1B	DGN	Sep	7	4R	OT	Jul	1
	SGN	Sep	25	4T	SGN	Jun	252

DENMARK (Greenland)

Reported by: Sv. Aa. Horsted

Length measurements are made of total length (end of tail lobes) and are reported to the centimetre below.

The following table presents data on measurement of capelin, Atlantic salmon, Queen crab and shrimp in 1970:

FRANCE (St. Pierre and Miquelon)

Reported by: J. Morice

All species are measured as total length and recorded to the centimetre below for species greater than 20 centimetres.

GERMANY (Federal Republic)

Reported by: A. Meyer

Length measurements are made of the total length (end of tail lobes) and recorded to the centimetre below.

ICELAND

No fishing in ICNAF area.

ITALY

No fishing in ICNAF area.

JAPAN

Reported by: I. Ikeda

Samples were collected from the exploratory catches in the spring and commercial catches in the summer and autumn.

Length measurements are fork lengths for fish with forked caudal fins and total lengths for others. For squid the mantle length was measured.

Data on cod, redfish, silver hake, herring, American plaice, witch, white hake, argentine, butterfish, alewife, shad, mackerel and squid are reported.

NORWAY

No data submitted.

POLAND

Reported by: E. Stanek, B. Draganik

Measurements are made of the total length to the nearest centimetre. The measuring board is offset 0.5 cm to permit measuring to the nearest centimetre.

Data are reported for cod and herring.

PORTUGAL

Reported by: R. Monteiro

Length measurements are made of total length and recorded to the nearest centimetre.

ROMANIA

No data submitted.

SPAIN

Reported by: M.G. Larrañeta, J. Rucabado

Length measurements are made of the total length (end of tail lobes) and are recorded to the centimetre below.

UNION OF SOVIET SOCIALIST REPUBLICSReported by: K.G. Konstantinov, A.S. Noskov,
V.A. Richter, A.P. Senina

Length measurements are made of the total length and recorded to the nearest centimetre.

UNITED KINGDOM

Reported by: C. Whiting, A. Callan

Measurements are made of the total length to the centimetre below.

UNITED STATES

Reported by: H.C. Boyar, V. Anthony, F.A. Dreyer

The length measurements were made of the fork length to the nearest centimetre for cod and haddock and to the nearest millimetre for redfish and herring. For scale and otolith samples, measurements are made to the nearest millimetre.

EFFICIENCY OF SAMPLING

In order to assess the adequacy of sampling the various fish stocks for length and age by the countries fishing in the Northwest Atlantic, the Statistics and Sampling Subcommittee recommended in 1970 that tables be prepared showing for each species, division, country and gear the number of fish sampled for length and age in relation to total catch (*Redbook* 1970, Pt. I, p.71). Data for the years 1969 and 1970 are presented in the Appendix.

Tables A and B present summaries of the 1969 and 1970 data in terms of the sampling efficiency by country and subarea. The "sampling efficiency" is defined as the ratio of "number measured" to "product of the catch in '000 tons times 200". Sampling efficiency values less than 1.0 indicate that the minimum ICNAF sampling requirement (200 length measurements for each 1000 tons of a species caught) has not been carried out.

Table A. Summary of sampling in relation to catch for 1969 by species, country, gear and subarea.

Species	Country	Gear	Catch ('000 tons) by Subarea with sampling efficiency in parentheses						Total
			1	2	3	4	5	6	
Cod	Can (M)	OT	-	-	3(-)	56(0.9)	5(0.9)	-	64 (0.8)
		LL	-	-	-	15(0.7)	1(-)	-	16 (0.7)

AGE/LENGTH KEYS - SILVER HAKE - 1970

(Available on request from the Secretariat)

In accordance with a recommendation made by the Research and Statistics Committee at their Annual Meeting in 1962 and reaffirmed in 1965, Age/Length Keys and Frequencies will not be published but are to be deposited in the Secretariat and made available to Member Countries on request. The following Age/Length Keys and Frequencies for silver hake are now on file in the Secretariat:

AGE/LENGTH KEYS - RED HAKE - 1970

(Available on request from the Secretariat)

In accordance with a recommendation made by the Research and Statistics Committee at their Annual Meeting in 1962 and reaffirmed in 1965, Age/Length Keys and Frequencies will not be published but are to be deposited in the Secretariat and made available to Member Countries on request. The following Age/Length Keys and Frequencies for red hake are now on file in the Secretariat:
