NOTE

The data in this paper were initially published as FAO Fisheries Circular No. 725 in March 1980, but copies of the circular are no longer available. The demand for additional copies prompted the NAFO Secretariat to substantially reduce the size of the volume (number of pages) without omitting any of the data. This was achieved by eliminating large gaps between data records.

For bibliographic purposes, citation of this paper should be the same as that for the original Circular, as follows:

INTRODUCTION

The FAO Department of Fisheries published in 1971 Bulletin of Fishery Statistics No. 25 entitled "Conversion factors: North Atlantic Species, 1970". This Bulletin which followed Fisheries Circulars Nos. 157 and 223 on the same subject, contained the conversion factors applied by national offices of countries fishing in the North Atlantic to calculate the live weight equivalent of the fish and fish products landed.

The Coordinating Working Party on Atlantic Fishery Statistics (CWP) at its Seventh Session (Rome 1971) reviewed the Bulletin and stressed that, according to opinions already expressed at previous sessions, the work of compiling and publishing conversion factors was not intended to establish common international factors; the main aim being rather to stimulate national statistical offices to compare the factors they are using with those applied by other countries for the same species and the same type of product, so that significant discrepancies could be investigated and the accuracy of the conversion factors tested.

The CWP at its Seventh Session (Rome, November 1971) recommended that:

(a) "conversion factors for processed products landed by factory vessels be included in future issues of the Bulletin;
(b) the CWP Secretary distributes the Bulletin to all countries fishing in the North Atlantic for examination, requesting them to report errors and explain apparent discrepancies;
(c) FAO, through the CWP Secretary, in cooperation with ICNAF, ICES, ICCAT, OECD, SOEC, keep the Bulletin under continuous review in collaboration with national offices.

The CWP recognized that a close link exists between the conversion factors used in catch/landing statistics and those reflecting extraction rates for processed commodities handled in shore-based establishments and markets and suggested that developments in these fields should be closely coordinated.

The problem of conversion factors was again reviewed by the Eighth Session of the CWP (Paris, September 1974) and the need for an updated and expanded version of Bulletin No. 25 was expressed, in view of the increased need to allocate catch quotas.

At its Ninth Session (Dartmouth, Canada, 1977) the CWP "recognized two types of conversion factors. The first consisted of those which are applied to convert landings to nominal catches, and which are vital for resource management purposes. The second type related landings to products processed ashore so that supply balance sheets may be established. These balance sheets are essential for commodity studies." It also recommended "that FAO undertake a review of conversion factors, and that EUROSTAT be requested to collect these factors from EEC member states".

In the light of these recommendations, the FAO Fisheries Department has approached national statistical offices asking for their cooperation in supplying up-to-date conversion factors used to convert (a) landings (landed weight) to nominal catches (live weight), (b) fishery products (net product weight) to the corresponding raw material utilized (live weight) and (c) selected volume and capacity units (crans, baskets, etc.) and non-metric mass units to metric mass (weight units) - metric tons, kilogrammes, etc.

The present document, confined to fish species caught in the Atlantic Ocean, presents for individual species, arranged within the groups of ISSCAAP (International Standard Statistical Classification of Aquatic Animals and Plants), the conversion factors applied to calculate the live weight of the fish both from the corresponding landed weight and from the net weight of the various fish products processed on board or in shore-based plants. The species items for which conversion factors were made available to FAO are arranged in the taxonomic order.
followed in the FAO Yearbook of Fishery Statistics "Catches and landings" volumes. Each species item is identified by means of the following descriptor: (a) its FAO English name; (b) its FAO French name; (c) its FAO Spanish name; (d) its scientific name (at the species, genus or family level); (e) its taxonomic code and its inter-agency 3-alpha identifier. The two-digit code indicating the inland or marine fishing area in which the species is caught, appears in a column to the right of the descriptor which identifies each species.

The diagram appearing on the following page illustrates various concepts commonly used in fishery statistics; the attention of the reader is drawn to the rectangles shown at the bottom of the diagram, i.e. "Landings" and "Nominal catch". The latter represents the weight basis which is obtained by applying to "landings" the appropriate conversion factors.

In all tables country names are designated by a multilingual code of not more than twelve characters (for additional information the reader may consult the "List of Countries" appearing on page 361 of Volume 46 of the FAO Yearbook of Fishery Statistics, "Catches and Landings, 1978").

The information appearing in this document was obtained from (a) data submitted by national offices in reply to FAO's request, (b) Document D/FI/50 prepared by the Working Group on "Fishery Statistics" of the Statistical Office of the European Communities, (c) data previously published in FAO Bulletin of Fishery Statistics No. 25 and (d) national statistical publications.

This document will be circulated to the national statistical offices with a request to compare their national factors with those of other countries so that discrepancies could, if necessary, be investigated, and possibly corrected. Countries which have not yet supplied this information will be invited to provide FAO with such quantity conversion factors to make possible in the future the publication of a more comprehensive document.

STANDARD SYMBOLS

... Information not available

NEI Not elsewhere included
UNRECORDED
Mr smow
Unrecorded landings dumped at sea; black market landings: unrecorded quantities landed for human consumption, etc.

GAINS PRIOR TO LANDINGS
Gain of fluid content, addition of liquids or solids during shipboard processing

UNRECORDED, REJECTED OR DUMPED LANDINGS
Unrecorded landings dumped at sea; black market landings; unrecorded quantities landed for human consumption, etc.

PRE-CATCH LOSSES
The total live weight of fish which die as a result of fishing operation and which are lost and not caught, including losses caused through gear lost during fishing

GROSS REMOVAL
The total live weight of fish caught, or killed, during fishing operation

GROSS CATCH
The total live weight of fish caught

RETAINED CATCH
The total live weight of fish retained

DICARDED CATCH
The total live weight of undersized, unsaleable or otherwise undesirable whole fish discarded at the time of capture or shortly afterwards

UTILISATION AND LOSSES PRIOR TO LANDINGS
- Consumption by crew
- Use for bait
- Spoilage and subsequent dumping
- Losses in handling at sea and when landing

GAINS PRIOR TO LANDINGS
Conversion factors

LOSSES DUE TO DRESSING, PROCESSING AND HANDLING
- Dumped viscera, heads, and other parts
- Loss of fluid content

LANDINGS
The net weight of eviscerated, partially eviscerated, filleted, frozen, cured, canned fish and fish products, fishmeal, oils, etc., as recorded at the time of landing

GROSS CATCH
The total live weight of fish caught

RETRAINT CATCH
The total live weight of fish retained

NOMINAL CATCH
The live weight equivalent of the landings i.e.: landings on a round, fresh basis; landings on a round, whole basis; landings on an ex-vessel weights basis.

- Conversion factors

PRE-CATCH LOSSES
The total live weight of fish which die as a result of fishing operation and which are lost and not caught, including losses caused through gear lost during fishing

DICARDED CATCH
The total live weight of undersized, unsaleable or otherwise undesirable whole fish discarded at the time of capture or shortly afterwards

GROSS REMOVAL
The total live weight of fish caught, or killed, during fishing operation

GROSS CATCH
The total live weight of fish caught
